

1. Modern computers

↳ vulnerabilities

2. programming

Von Neumann architecture

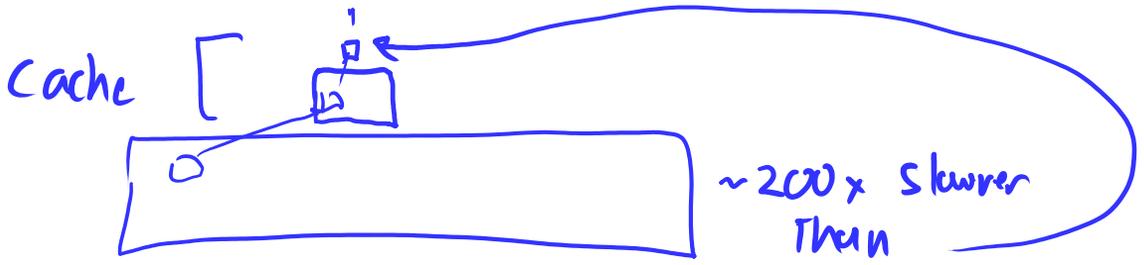

$$V_0 + V_2 \rightarrow V_3$$

32-bit reg
 $2^{32} \sim 4 \text{ GB memory}$

64-bit reg
 $2^{64} \sim \text{very very big}$

gives away on power off

Memory ~ RAM

16 GB

run programs

Enough or not

lasts

Storage ~ disk

~ 1 million x slower

500 GB

store files

~10x speed

V_0, V_3 ?

Processor

$$y = m \times b$$

$$m \times x \rightarrow t$$

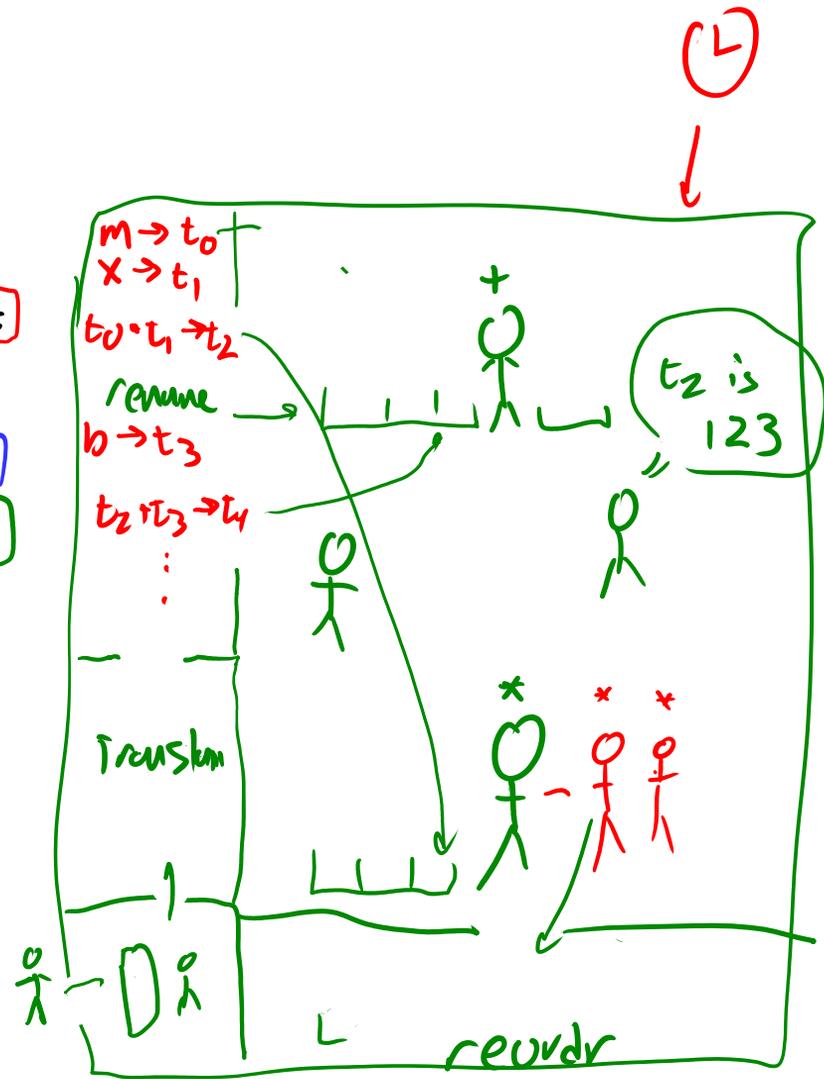

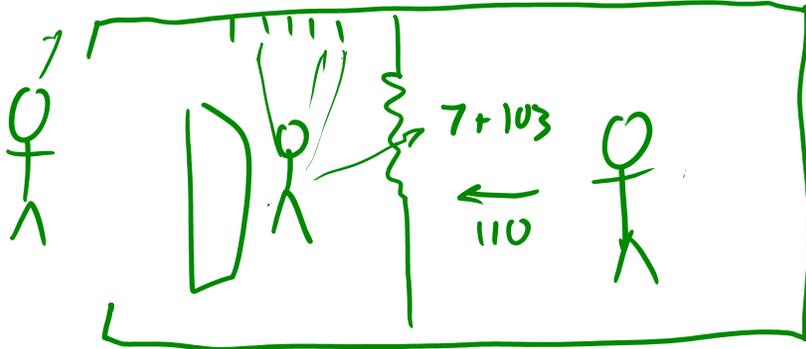

$$t + b \rightarrow y$$

$$a + b \rightarrow t$$

$$t \times w \rightarrow x$$

Control unit

ALU

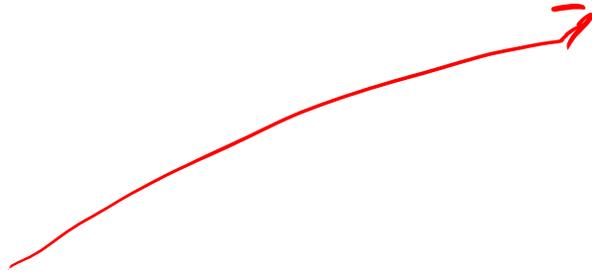

Speculation ~ 10-100x speedup

Processor
speculation

memory
cache
