# Halting, Undecidability, and Maybe Some Complexity 

Lecture 9
Tuesday, September 22, 2020

## Quote

"Young man, in mathematics you don't understand things. You just get used to them." - John von Neumann.

## 9.1 <br> Cantor's diagonalization argument

## You can not count the real numbers

```
I=(0,1).
N}={1,2,3,\ldots.} the integer numbers
```

Claim (Cantor)
$|\mathbb{N}| \neq|\boldsymbol{I}|$
Claim (Warm-up)
$|\mathbb{N}| \leq|I|$
$|\mathbb{N}| \leq|\boldsymbol{I}|$ exists a one-to-one mapping from $\mathbb{N}$ to $\boldsymbol{I}$. One such mapping is $\boldsymbol{f}(\boldsymbol{i})=\mathbf{1} / \boldsymbol{i}$, which readily implies the claim.

## You can not count the real numbers

$I=(\mathbf{0}, \mathbf{1})$.
$\mathbb{N}=\{1,2,3, \ldots\}$ the integer numbers
Claim (Cantor)
$|\mathbb{N}| \neq|I|$
Claim (Warm-up)
$|\mathbb{N}| \leq|I|$

## Proof.

$|\mathbb{N}| \leq|\boldsymbol{I}|$ exists a one-to-one mapping from $\mathbb{N}$ to $\boldsymbol{I}$. One such mapping is $\boldsymbol{f}(\boldsymbol{i})=\mathbf{1} / \boldsymbol{i}$, which readily implies the claim.

## You can not count the real numbers II

$$
I=(0,1), \mathbb{N}=\{1,2,3, \ldots\}
$$

Claim (Cantor)
$|\mathbb{N}| \neq|\boldsymbol{I}|$, where $\boldsymbol{I}=(\mathbf{0}, \mathbf{1})$.

## Proof.

Write every number in $(\mathbf{0}, \mathbf{1})$ in its decimal expansion. E.g.
$1 / 3=0.33333333333333333333$
Assume that $|\mathbb{N}|=|I|$. Then there exists a one-to-one mapping $f: \mathbb{N} \rightarrow I$. Let $\beta_{i}$ be the $i$ th digit of $f(i) \in(0,1)$
$\boldsymbol{d}_{i}=$ any number in $\{\mathbf{0}, \mathbf{1}, \mathbf{2}, \mathbf{3}, 4,5, \mathbf{6}, \mathbf{7}, \mathbf{8}, 9\} \backslash\left\{\boldsymbol{d}_{i-1}, \boldsymbol{\beta}_{i}\right\}$
$D=0 . d_{1} d_{2} d_{3} \ldots \in(0,1)$
$D$ is a well defined unique number in $(0,1)$
But there is no $j$ such that $f(j)=D$. A contradiction.

## You can not count the real numbers II

$$
I=(0,1), \mathbb{N}=\{1,2,3, \ldots\}
$$

## Claim (Cantor)

$|\mathbb{N}| \neq|\boldsymbol{I}|$, where $\boldsymbol{I}=(\mathbf{0}, \mathbf{1})$.

## Proof.

Write every number in $(\mathbf{0}, \mathbf{1})$ in its decimal expansion. E.g.,
$1 / 3=0.33333333333333333333 \ldots$
Assume that $|\mathbb{N}|=|\boldsymbol{I}|$. Then there exists a one-to-one mapping $\boldsymbol{f}: \mathbb{N} \rightarrow \boldsymbol{I}$. Let $\boldsymbol{\beta}_{\boldsymbol{i}}$ be the $\boldsymbol{i}$ th digit of $\boldsymbol{f}(\boldsymbol{i}) \in(\mathbf{0}, \mathbf{1})$.
$\boldsymbol{d}_{\boldsymbol{i}}=$ any number in $\{\mathbf{0}, \mathbf{1}, \mathbf{2}, \mathbf{3}, \mathbf{4}, \mathbf{5}, \mathbf{6}, \mathbf{7}, \mathbf{8}, \mathbf{9}\} \backslash\left\{\boldsymbol{d}_{\boldsymbol{i}-\mathbf{1}}, \boldsymbol{\beta}_{\boldsymbol{i}}\right\}$
$D=0 . \boldsymbol{d}_{1} \boldsymbol{d}_{\mathbf{2}} \boldsymbol{d}_{3} \ldots \in(\mathbf{0}, \mathbf{1})$.
$\boldsymbol{D}$ is a well defined unique number in $(\mathbf{0}, \mathbf{1})$,
But there is no $\boldsymbol{j}$ such that $\boldsymbol{f}(\boldsymbol{j})=\boldsymbol{D}$. A contradiction.

The matrix...

|  | $\boldsymbol{f}(\mathbf{1})$ | $\boldsymbol{f}(\mathbf{2})$ | $\boldsymbol{f}(\mathbf{3})$ | $\boldsymbol{f}(\mathbf{4})$ | $\ldots$ |
| :--- | :--- | :--- | :--- | :--- | :--- |
| $\mathbf{1}$ | $\mathbf{1}$ | 1 | 0 | 0 | $\ldots$ |
| $\mathbf{2}$ | 0 | $\mathbf{1}$ | 0 | 1 | $\ldots$ |
| $\mathbf{3}$ | 1 | 0 | $\mathbf{1}$ | 1 | $\ldots$ |
| $\mathbf{4}$ | 0 | 1 | 0 | $\mathbf{0}$ | $\ldots$ |
| $\vdots$ | $\vdots$ | $\vdots$ | $\vdots$ | $\vdots$ | $\ddots$ |

The matrix...

|  | $\boldsymbol{f}(\mathbf{1})$ | $\boldsymbol{f}(\mathbf{2})$ | $\boldsymbol{f}(\mathbf{3})$ | $\boldsymbol{f}(\mathbf{4})$ | $\ldots$ |
| :--- | :--- | :--- | :--- | :--- | :--- |
| $\mathbf{1}$ | $\boldsymbol{\beta}_{\mathbf{1}}=\mathbf{1}$ | 1 | 0 | 0 | $\cdots$ |
| $\mathbf{2}$ | 0 | $\boldsymbol{\beta}_{\mathbf{2}}=\mathbf{1}$ | 0 | 1 | $\ldots$ |
| $\mathbf{3}$ | 1 | 0 | $\boldsymbol{\beta}_{\mathbf{3}}=\mathbf{1}$ | 1 | $\ldots$ |
| $\mathbf{4}$ | 0 | 1 | 0 | $\boldsymbol{\beta}_{\mathbf{4}}=\mathbf{0}$ | $\ldots$ |
| $\vdots$ | $\vdots$ | $\vdots$ | $\vdots$ | $\vdots$ | $\ddots$ |

$\boldsymbol{d}_{\boldsymbol{i}}=$ any number in $\{\mathbf{0}, \mathbf{1}, \mathbf{2}, \mathbf{3}, \mathbf{4}, \mathbf{5}, \mathbf{6}, \mathbf{7}, \mathbf{8}, \mathbf{9}\} \backslash\left\{\boldsymbol{d}_{\boldsymbol{i}-\mathbf{1}}, \boldsymbol{\beta}_{\boldsymbol{i}}\right\}$

The matrix...

|  | $\boldsymbol{f}(\mathbf{1})$ | $\boldsymbol{f}(\mathbf{2})$ | $\boldsymbol{f}(\mathbf{3})$ | $\boldsymbol{f}(\mathbf{4})$ | $\ldots$ |
| :--- | :--- | :--- | :--- | :--- | :--- |
| $\mathbf{1}$ | $\mathbf{1}$ | 1 | 0 | 0 | $\cdots$ |
| $\mathbf{2}$ | 0 | $\mathbf{1}$ | 0 | 1 | $\ldots$ |
| $\mathbf{3}$ | 1 | 0 | $\mathbf{1}$ | 1 | $\ldots$ |
| $\mathbf{4}$ | 0 | 1 | 0 | $\mathbf{0}$ | $\ldots$ |
| $\vdots$ | $\vdots$ | $\vdots$ | $\vdots$ | $\vdots$ | $\ddots$ |

$\boldsymbol{d}_{\boldsymbol{i}}=$ any number in $\{\mathbf{0}, \mathbf{1}, \mathbf{2}, \mathbf{3}, \mathbf{4}, \mathbf{5}, \mathbf{6}, \mathbf{7}, \mathbf{8}, \mathbf{9}\} \backslash\left\{\boldsymbol{d}_{\boldsymbol{i}-\mathbf{1}}, \boldsymbol{\beta}_{\boldsymbol{i}}\right\}$
$\Longrightarrow \forall \boldsymbol{i} \boldsymbol{\beta}_{\boldsymbol{i}} \neq \boldsymbol{d}_{\boldsymbol{i}}$.

## The matrix...

|  | $\boldsymbol{f}(\mathbf{1})$ | $\boldsymbol{f}(\mathbf{2})$ | $\boldsymbol{f}(\mathbf{3})$ | $\boldsymbol{f}(\mathbf{4})$ | $\ldots$ |
| :--- | :--- | :--- | :--- | :--- | :--- |
| $\mathbf{1}$ | $\mathbf{1}$ | 1 | 0 | 0 | $\ldots$ |
| $\mathbf{2}$ | 0 | $\mathbf{1}$ | 0 | 1 | $\ldots$ |
| $\mathbf{3}$ | 1 | 0 | $\mathbf{1}$ | 1 | $\ldots$ |
| $\mathbf{4}$ | 0 | 1 | 0 | $\mathbf{0}$ | $\ldots$ |
| $\vdots$ | $\vdots$ | $\vdots$ | $\vdots$ | $\vdots$ | $\ddots$ |

$\boldsymbol{d}_{\boldsymbol{i}}=$ any number in $\{\mathbf{0}, \mathbf{1}, \mathbf{2}, \mathbf{3}, \mathbf{4}, \mathbf{5}, \mathbf{6}, \mathbf{7}, \mathbf{8}, \mathbf{9}\} \backslash\left\{\boldsymbol{d}_{\boldsymbol{i}-\mathbf{1}}, \boldsymbol{\beta}_{\boldsymbol{i}}\right\}$
$\Longrightarrow \forall i \boldsymbol{\beta}_{\boldsymbol{i}} \neq \boldsymbol{d}_{\boldsymbol{i}}$.
$D=0.23232323$
$\boldsymbol{D}$ can not be the $\boldsymbol{i}$ column, because $\boldsymbol{\beta}_{\boldsymbol{i}} \neq \boldsymbol{d}_{\boldsymbol{i}}$.

## The matrix...

|  | $\boldsymbol{f}(\mathbf{1})$ | $\boldsymbol{f}(\mathbf{2})$ | $\boldsymbol{f}(\mathbf{3})$ | $\boldsymbol{f}(\mathbf{4})$ | $\ldots$ |
| :--- | :--- | :--- | :--- | :--- | :--- |
| $\mathbf{1}$ | $\mathbf{1}$ | 1 | 0 | 0 | $\ldots$ |
| $\mathbf{2}$ | 0 | $\mathbf{1}$ | 0 | 1 | $\ldots$ |
| $\mathbf{3}$ | 1 | 0 | $\mathbf{1}$ | 1 | $\ldots$ |
| $\mathbf{4}$ | 0 | 1 | 0 | $\mathbf{0}$ | $\ldots$ |
| $\vdots$ | $\vdots$ | $\vdots$ | $\vdots$ | $\vdots$ | $\ddots$ |

$\boldsymbol{d}_{\boldsymbol{i}}=$ any number in $\{\mathbf{0}, \mathbf{1}, \mathbf{2}, \mathbf{3}, \mathbf{4}, \mathbf{5}, \mathbf{6}, \mathbf{7}, \mathbf{8}, \mathbf{9}\} \backslash\left\{\boldsymbol{d}_{\boldsymbol{i}-\mathbf{1}}, \boldsymbol{\beta}_{\boldsymbol{i}}\right\}$
$\Longrightarrow \forall i \boldsymbol{\beta}_{\boldsymbol{i}} \neq \boldsymbol{d}_{\boldsymbol{i}}$.
$D=0.23232323$
$\boldsymbol{D}$ can not be the $\boldsymbol{i}$ column, because $\boldsymbol{\beta}_{\boldsymbol{i}} \neq \boldsymbol{d}_{\boldsymbol{i}}$. But $\boldsymbol{D}$ can not be in the matrix...

## The liar paradox

When one day an expedition was sent to the spatial coordinates that Voojagig had claimed for this planet they discovered only a small asteroid inhabited by a solitary old man who claimed repeatedly that nothing was true, though he was later discovered to be lying.

- The Hitchhiker Guide to the Galaxy
© The liar's paradox: This sentence is false.
(2) Related to Russell's paradox.
- Omnipotence paradox: Can [an omnipotent being] create a stone so heavy that it cannot lift it?
