

## Programming Languages and Compilers (CS 421)

Elsa L Gunter  
2112 SC, UIUC

<http://courses.engr.illinois.edu/cs421>

Based in part on slides by Mattox Beckman, as updated by Vikram Adve and Gul Agha

10/19/23

1

## Example : test.mll

```
{ type result = Int of int | Float of float |
  String of string }
let digit = ['0'-'9']
let digits = digit +
let lower_case = ['a'-'z']
let upper_case = ['A'-'Z']
let letter = upper_case | lower_case
let letters = letter +
```

10/26/23

2

## Example : test.mll

```
rule main = parse
  (digits)'.'digits as f { Float (float_of_string f) }
  | digits as n          { Int (int_of_string n) }
  | letters as s         { String s}
  | _ { main lexbuf }
{ let newlexbuf = (Lexing.from_channel stdin) in
  print_newline ();
  main newlexbuf }
```

10/26/23

3

## Example

```
# #use "test.mll";
...
val main : Lexing.lexbuf -> result = <fun>
val __ocaml_lex_main_rec : Lexing.lexbuf -> int ->
  result = <fun>
hi there 234 5.2
- : result = String "hi"
```

What happened to the rest?!?

10/26/23

4

## Example

```
# let b = Lexing.from_channel stdin;;
# main b;;
hi 673 there
- : result = String "hi"
# main b;;
- : result = Int 673
# main b;;
- : result = String "there"
```

10/26/23

5

## Problem

- How to get lexer to look at more than the first token at one time?
- Answer: *action* has to tell it to -- recursive calls
  - Not what you want to sew this together with *ocaml yacc*
- Side Benefit: can add “state” into lexing
- Note: already used this with the `_` case

10/26/23

7

## Example

```
rule main = parse
  (digits) '.' digits as f { Float
    (float_of_string f) :: main lexbuf }
  | digits as n           { Int (int_of_string n) ::
    main lexbuf }
  | letters as s         { String s :: main
    lexbuf }
  | eof                  { [] }
  | _                    { main lexbuf }
```

10/26/23

8

## Example Results

```
hi there 234 5.2
- : result list = [String "hi"; String "there"; Int
  234; Float 5.2]
#
```

Used Ctrl-d to send the end-of-file signal

10/26/23

9

## Dealing with comments

### First Attempt

```
let open_comment = "("
let close_comment = ")"
rule main = parse
  (digits) '.' digits as f { Float (float_of_string
    f) :: main lexbuf }
  | digits as n           { Int (int_of_string n) ::
    main lexbuf }
  | letters as s         { String s :: main lexbuf }
```

10/26/23

10

## Dealing with comments

```
| open_comment      { comment lexbuf }
| eof                { [] }
| _ { main lexbuf }
and comment = parse
  close_comment     { main lexbuf }
  | _               { comment lexbuf }
```

10/26/23

11

## Dealing with nested comments

```
rule main = parse ...
  | open_comment     { comment 1 lexbuf }
  | eof              { [] }
  | _ { main lexbuf }
and comment depth = parse
  open_comment      { comment (depth+1) lexbuf }
  | close_comment   { if depth = 1
    then main lexbuf
    else comment (depth - 1) lexbuf }
  | _               { comment depth lexbuf }
```

10/26/23

12

## Dealing with nested comments

```
rule main = parse
  (digits) '.' digits as f { Float (float_of_string f) ::
    main lexbuf }
  | digits as n           { Int (int_of_string n) :: main
    lexbuf }
  | letters as s         { String s :: main lexbuf }
  | open_comment         { (comment 1 lexbuf) }
  | eof                  { [] }
  | _ { main lexbuf }
```

10/26/23

13

## Dealing with nested comments

```
and comment depth = parse
  open_comment    { comment (depth+1) lexbuf
  }
  | close_comment { if depth = 1
                    then main lexbuf
                    else comment (depth - 1) lexbuf }
  | _             { comment depth lexbuf }
```

10/26/23

14

## Types of Formal Language Descriptions

- Regular expressions, regular grammars
- Context-free grammars, BNF grammars, syntax diagrams
- Finite state automata
- Pushdown automata
- Whole family more of grammars and automata – covered in automata theory

10/19/23

16

## BNF Grammars

- Start with a set of characters, **a,b,c,...**
  - We call these *terminals*
- Add a set of different characters, **X,Y,Z,...**
  - We call these *nonterminals*
- One special nonterminal **S** called *start symbol*

10/19/23

17

## BNF Grammars

- BNF rules (aka *productions*) have form  
$$\mathbf{X} ::= \gamma$$
where **X** is any nonterminal and  $\gamma$  is a string of terminals and nonterminals
- BNF *grammar* is a set of BNF rules such that every nonterminal appears on the left of some rule

10/19/23

18

## Sample Grammar

- Terminals: 0 1 + ( )
- Nonterminals: <Sum>
- Start symbol = <Sum>
- $\langle \text{Sum} \rangle ::= 0$
- $\langle \text{Sum} \rangle ::= 1$
- $\langle \text{Sum} \rangle ::= \langle \text{Sum} \rangle + \langle \text{Sum} \rangle$
- $\langle \text{Sum} \rangle ::= (\langle \text{Sum} \rangle)$
- Can be abbreviated as  
$$\langle \text{Sum} \rangle ::= 0 \mid 1 \mid \langle \text{Sum} \rangle + \langle \text{Sum} \rangle \mid (\langle \text{Sum} \rangle)$$

10/19/23

20

## BNF Derivations

- Given rules  
$$\mathbf{X} ::= \mathbf{yZw} \text{ and } \mathbf{Z} ::= \mathbf{v}$$
we may replace **Z** by  $\mathbf{v}$  to say  
$$\mathbf{X} \Rightarrow \mathbf{yZw} \Rightarrow \mathbf{yvw}$$
- Sequence of such replacements called *derivation*
- Derivation called *right-most* if always replace the right-most non-terminal

10/19/23

21

## BNF Semantics

- The meaning of a BNF grammar is the set of all strings consisting only of terminals that can be derived from the Start symbol

10/19/23

22

## BNF Derivations

- Start with the start symbol:

$\langle \text{Sum} \rangle \Rightarrow$

10/19/23

23

## BNF Derivations

- Pick a non-terminal

$\langle \text{Sum} \rangle \Rightarrow$

10/19/23

24

## BNF Derivations

- Pick a rule and substitute:
  - $\langle \text{Sum} \rangle ::= \langle \text{Sum} \rangle + \langle \text{Sum} \rangle$

$\langle \text{Sum} \rangle \Rightarrow \langle \text{Sum} \rangle + \langle \text{Sum} \rangle$

10/19/23

25

## BNF Derivations

- Pick a non-terminal:

$\langle \text{Sum} \rangle \Rightarrow \langle \text{Sum} \rangle + \langle \text{Sum} \rangle$

10/19/23

26

## BNF Derivations

- Pick a rule and substitute:

■  $\langle \text{Sum} \rangle ::= ( \langle \text{Sum} \rangle )$   
 $\langle \text{Sum} \rangle \Rightarrow \langle \text{Sum} \rangle + \langle \text{Sum} \rangle$   
 $\Rightarrow ( \langle \text{Sum} \rangle ) + \langle \text{Sum} \rangle$

10/19/23

27

## BNF Derivations

- Pick a non-terminal:

$$\begin{aligned}\langle \text{Sum} \rangle &\Rightarrow \langle \text{Sum} \rangle + \langle \text{Sum} \rangle \\ &\Rightarrow ( \langle \text{Sum} \rangle ) + \langle \text{Sum} \rangle\end{aligned}$$

10/19/23

28

## BNF Derivations

- Pick a rule and substitute:

- $\langle \text{Sum} \rangle ::= \langle \text{Sum} \rangle + \langle \text{Sum} \rangle$

$$\begin{aligned}\langle \text{Sum} \rangle &\Rightarrow \langle \text{Sum} \rangle + \langle \text{Sum} \rangle \\ &\Rightarrow ( \langle \text{Sum} \rangle ) + \langle \text{Sum} \rangle \\ &\Rightarrow ( \langle \text{Sum} \rangle + \langle \text{Sum} \rangle ) + \langle \text{Sum} \rangle\end{aligned}$$

10/19/23

29

## BNF Derivations

- Pick a non-terminal:

$$\begin{aligned}\langle \text{Sum} \rangle &\Rightarrow \langle \text{Sum} \rangle + \langle \text{Sum} \rangle \\ &\Rightarrow ( \langle \text{Sum} \rangle ) + \langle \text{Sum} \rangle \\ &\Rightarrow ( \langle \text{Sum} \rangle + \langle \text{Sum} \rangle ) + \langle \text{Sum} \rangle\end{aligned}$$

10/19/23

30

## BNF Derivations

- Pick a rule and substitute:

- $\langle \text{Sum} \rangle ::= 1$

$$\begin{aligned}\langle \text{Sum} \rangle &\Rightarrow \langle \text{Sum} \rangle + \langle \text{Sum} \rangle \\ &\Rightarrow ( \langle \text{Sum} \rangle ) + \langle \text{Sum} \rangle \\ &\Rightarrow ( \langle \text{Sum} \rangle + \langle \text{Sum} \rangle ) + \langle \text{Sum} \rangle \\ &\Rightarrow ( \langle \text{Sum} \rangle + 1 ) + \langle \text{Sum} \rangle\end{aligned}$$

10/19/23

31

## BNF Derivations

- Pick a non-terminal:

$$\begin{aligned}\langle \text{Sum} \rangle &\Rightarrow \langle \text{Sum} \rangle + \langle \text{Sum} \rangle \\ &\Rightarrow ( \langle \text{Sum} \rangle ) + \langle \text{Sum} \rangle \\ &\Rightarrow ( \langle \text{Sum} \rangle + \langle \text{Sum} \rangle ) + \langle \text{Sum} \rangle \\ &\Rightarrow ( \langle \text{Sum} \rangle + 1 ) + \langle \text{Sum} \rangle\end{aligned}$$

10/19/23

32

## BNF Derivations

- Pick a rule and substitute:

- $\langle \text{Sum} \rangle ::= 0$

$$\begin{aligned}\langle \text{Sum} \rangle &\Rightarrow \langle \text{Sum} \rangle + \langle \text{Sum} \rangle \\ &\Rightarrow ( \langle \text{Sum} \rangle ) + \langle \text{Sum} \rangle \\ &\Rightarrow ( \langle \text{Sum} \rangle + \langle \text{Sum} \rangle ) + \langle \text{Sum} \rangle \\ &\Rightarrow ( \langle \text{Sum} \rangle + 1 ) + \langle \text{Sum} \rangle \\ &\Rightarrow ( \langle \text{Sum} \rangle + 1 ) + 0\end{aligned}$$

10/19/23

33

## BNF Derivations

- Pick a non-terminal:

$\langle \text{Sum} \rangle \Rightarrow \langle \text{Sum} \rangle + \langle \text{Sum} \rangle$   
 $\Rightarrow ( \langle \text{Sum} \rangle ) + \langle \text{Sum} \rangle$   
 $\Rightarrow ( \langle \text{Sum} \rangle + \langle \text{Sum} \rangle ) + \langle \text{Sum} \rangle$   
 $\Rightarrow ( \langle \text{Sum} \rangle + 1 ) + \langle \text{Sum} \rangle$   
 $\Rightarrow ( \langle \text{Sum} \rangle + 1 ) + 0$

10/19/23

34

## BNF Derivations

- Pick a rule and substitute

- $\langle \text{Sum} \rangle ::= 0$

$\langle \text{Sum} \rangle \Rightarrow \langle \text{Sum} \rangle + \langle \text{Sum} \rangle$   
 $\Rightarrow ( \langle \text{Sum} \rangle ) + \langle \text{Sum} \rangle$   
 $\Rightarrow ( \langle \text{Sum} \rangle + \langle \text{Sum} \rangle ) + \langle \text{Sum} \rangle$   
 $\Rightarrow ( \langle \text{Sum} \rangle + 1 ) + \langle \text{Sum} \rangle$   
 $\Rightarrow ( \langle \text{Sum} \rangle + 1 ) + 0$   
 $\Rightarrow ( 0 + 1 ) + 0$

10/19/23

35

## BNF Derivations

- $( 0 + 1 ) + 0$  is generated by grammar

$\langle \text{Sum} \rangle \Rightarrow \langle \text{Sum} \rangle + \langle \text{Sum} \rangle$   
 $\Rightarrow ( \langle \text{Sum} \rangle ) + \langle \text{Sum} \rangle$   
 $\Rightarrow ( \langle \text{Sum} \rangle + \langle \text{Sum} \rangle ) + \langle \text{Sum} \rangle$   
 $\Rightarrow ( \langle \text{Sum} \rangle + 1 ) + \langle \text{Sum} \rangle$   
 $\Rightarrow ( \langle \text{Sum} \rangle + 1 ) + 0$   
 $\Rightarrow ( 0 + 1 ) + 0$

10/19/23

36

## Extended BNF Grammars

- Alternatives: allow rules of form  $X ::= y/z$ 
  - Abbreviates  $X ::= y, X ::= z$
- Options:  $X ::= y[ v ]z$ 
  - Abbreviates  $X ::= yvz, X ::= yz$
- Repetition:  $X ::= y\{ v \}^*z$ 
  - Can be eliminated by adding new nonterminal  $V$  and rules  $X ::= yz, X ::= yVz, V ::= v, V ::= V$

10/19/23

37

## Parse Trees

- Graphical representation of derivation
- Each node labeled with either non-terminal or terminal
- If node is labeled with a terminal, then it is a leaf (no sub-trees)
- If node is labeled with a non-terminal, then it has one branch for each character in the right-hand side of rule used to substitute for it

10/19/23

39

## Example

- Consider grammar:  
 $\langle \text{exp} \rangle ::= \langle \text{factor} \rangle$   
 $\quad \quad \quad | \langle \text{factor} \rangle + \langle \text{factor} \rangle$   
 $\langle \text{factor} \rangle ::= \langle \text{bin} \rangle$   
 $\quad \quad \quad | \langle \text{bin} \rangle * \langle \text{exp} \rangle$   
 $\langle \text{bin} \rangle ::= 0 \quad | \quad 1$
- Problem: Build parse tree for  $1 * 1 + 0$  as an  $\langle \text{exp} \rangle$

10/19/23

40

### Example cont.

- 1 \* 1 + 0: <exp>

<exp> is the start symbol for this parse tree

10/19/23

41

### Example cont.

- 1 \* 1 + 0: <exp>  
|  
<factor>

Use rule: <exp> ::= <factor>

10/19/23

42

### Example cont.

- 1 \* 1 + 0: <exp>  
|  
<factor>  
/ | \  
<bin> \* <exp>

Use rule: <factor> ::= <bin> \* <exp>

10/19/23

43

### Example cont.

- 1 \* 1 + 0: <exp>  
|  
<factor>  
/ | \  
<bin> \* <exp>  
| / | \  
1 <factor> + <factor>

Use rules: <bin> ::= 1 and  
<exp> ::= <factor> +  
<factor>

10/19/23

44

### Example cont.

- 1 \* 1 + 0: <exp>  
|  
<factor>  
/ | \  
<bin> \* <exp>  
| / | \  
1 <factor> + <factor>  
| / | \  
<bin> <bin>

Use rule: <factor> ::= <bin>

10/19/23

45

### Example cont.

- 1 \* 1 + 0: <exp>  
|  
<factor>  
/ | \  
<bin> \* <exp>  
| / | \  
1 <factor> + <factor>  
| / | \  
<bin> <bin>  
| 1 0

Use rules: <bin> ::= 1 | 0

10/19/23

46

## Example cont.

Fringe of tree is string generated by grammar

10/19/23

47

## Parse Tree Data Structures

- Parse trees may be represented by OCaml datatypes
- One datatype for each nonterminal
- One constructor for each rule
- Defined as mutually recursive collection of datatype declarations

10/19/23

50

## Example

- Recall grammar:
  - $\langle \text{exp} \rangle ::= \langle \text{factor} \rangle \mid \langle \text{factor} \rangle + \langle \text{factor} \rangle$
  - $\langle \text{factor} \rangle ::= \langle \text{bin} \rangle \mid \langle \text{bin} \rangle * \langle \text{exp} \rangle$
  - $\langle \text{bin} \rangle ::= 0 \mid 1$
- type `exp = Factor2Exp of factor`  
 | `Plus of factor * factor`  
 and `factor = Bin2Factor of bin`  
 | `Mult of bin * exp`  
 and `bin = Zero | One`

10/19/23

51

## Example cont.

10/19/23

52

## Example cont.

- Can be represented as

```
Factor2Exp
(Mult(One,
      Plus(Bin2Factor One,
            Bin2Factor Zero)))
```

10/19/23

53

## Ambiguous Grammars and Languages

- A BNF grammar is *ambiguous* if its language contains strings for which there is more than one parse tree
- If all BNF's for a language are ambiguous then the language is *inherently ambiguous*

10/19/23

54

## Example: Ambiguous Grammar

- 0 + 1 + 0

10/19/23

55

## Two Major Sources of Ambiguity

- Lack of determination of operator precedence
- Lack of determination of operator associativity
- Not the only sources of ambiguity

10/19/23

60

## Disambiguating a Grammar

- Given ambiguous grammar  $G$ , with start symbol  $S$ , find a grammar  $G'$  with same start symbol, such that
 
$$\text{language of } G = \text{language of } G'$$
- Not always possible
- No algorithm in general

10/19/23

61

## Disambiguating a Grammar

- Idea: Each non-terminal represents all strings having some property
- Identify these properties (often in terms of things that can't happen)
- Use these properties to inductively guarantee every string in language has a unique parse

10/19/23

62

## Steps to Grammar Disambiguation

- Identify the rules and a smallest use that display ambiguity
- Decide which parse to keep; why should others be thrown out?
- What syntactic restrictions on subexpressions are needed to throw out the bad (while keeping the good)?
- Add a new non-terminal and rules to describe this set of restricted subexpressions (called stratifying, or refactoring)
- Characterize each non-terminal by a language invariant**
- Replace old rules to use new non-terminals
- Rinse and repeat

10/19/23

63

## Example

- Ambiguous grammar:
 
$$\begin{aligned} \langle \text{exp} \rangle ::= & 0 \mid 1 \mid \langle \text{exp} \rangle + \langle \text{exp} \rangle \\ & \mid \langle \text{exp} \rangle * \langle \text{exp} \rangle \end{aligned}$$
- String with more than one parse:
 
$$\begin{aligned} & 0 + 1 + 0 \\ & 1 * 1 + 1 \end{aligned}$$
- Source of ambiguity: associativity and precedence

10/19/23

64

## Two Major Sources of Ambiguity

- Lack of determination of operator precedence
- Lack of determination of operator associativity
- Not the only sources of ambiguity

10/4/07

65

## How to Enforce Associativity

- Have at most one recursive call per production
- When two or more recursive calls would be natural leave right-most one for right associativity, left-most one for left associativity

10/4/07

66

## Example

- $\langle \text{Sum} \rangle ::= 0 \mid 1 \mid \langle \text{Sum} \rangle + \langle \text{Sum} \rangle \mid (\langle \text{Sum} \rangle)$
- Becomes
  - $\langle \text{Sum} \rangle ::= \langle \text{Num} \rangle \mid \langle \text{Num} \rangle + \langle \text{Sum} \rangle$
  - $\langle \text{Num} \rangle ::= 0 \mid 1 \mid (\langle \text{Sum} \rangle)$

$\langle \text{Sum} \rangle + \langle \text{Sum} \rangle + \langle \text{Sum} \rangle$

10/4/07

67

## Operator Precedence

- Operators of highest precedence evaluated first (bind more tightly).
- Precedence for infix binary operators given in following table
- Needs to be reflected in grammar

10/4/07

68

## Precedence Table - Sample

	Fortan	Pascal	C/C++	Ada	SML
highest	**	*, /, div, mod	++, --	**	div, mod, /, *
	*, /	+, -	*, /, %	*, /, mod	+, -, ^
	+, -		+, -	+, -	::

10/4/07

69

## Precedence in Grammar

- Higher precedence translates to longer derivation chain
- Example:
  - $\langle \text{exp} \rangle ::= 0 \mid 1 \mid \langle \text{exp} \rangle + \langle \text{exp} \rangle \mid \langle \text{exp} \rangle * \langle \text{exp} \rangle$
- Becomes
  - $\langle \text{exp} \rangle ::= \langle \text{mult\_exp} \rangle \mid \langle \text{exp} \rangle + \langle \text{mult\_exp} \rangle$
  - $\langle \text{mult\_exp} \rangle ::= \langle \text{id} \rangle \mid \langle \text{mult\_exp} \rangle * \langle \text{id} \rangle$
  - $\langle \text{id} \rangle ::= 0 \mid 1$

10/4/07

71

## Parser Code

- `<grammar>.mly` defines one parsing function per entry point
- Parsing function takes a lexing function (lexer buffer to token) and a lexer buffer as arguments
- Returns semantic attribute of corresponding entry point

10/19/23

77

## Ocamlyacc Input

- File format:

```
%{  
  <header>  
}%  
  <declarations>  
%%  
  <rules>  
%%  
  <trailer>
```

10/19/23

78

## Ocamlyacc `<header>`

- Contains arbitrary Ocaml code
- Typically used to give types and functions needed for the semantic actions of rules and to give specialized error recovery
- May be omitted
- `<footer>` similar. Possibly used to call parser

10/19/23

79

## Ocamlyacc `<declarations>`

- `%token symbol ... symbol`
  - Declare given symbols as tokens
- `%token <type> symbol ... symbol`
  - Declare given symbols as token constructors, taking an argument of type `<type>`
- `%start symbol ... symbol`
  - Declare given symbols as entry points; functions of same names in `<grammar>.ml`

10/19/23

80

## Ocamlyacc `<declarations>`

- `%type <type> symbol ... symbol`
  - Specify type of attributes for given symbols. Mandatory for start symbols
- `%left symbol ... symbol`
- `%right symbol ... symbol`
- `%nonassoc symbol ... symbol`
  - Associate precedence and associativity to given symbols. Same line, same precedence; earlier line, lower precedence (broadest scope)

10/19/23

81

## Ocamlyacc `<rules>`

- `nonterminal :`
  - `symbol ... symbol { semantic_action }`
  - `| ...`
  - `| symbol ... symbol { semantic_action }`
  - `;`
- Semantic actions are arbitrary Ocaml expressions
- Must be of same type as declared (or inferred) for `nonterminal`
- Access semantic attributes (values) of symbols by position: \$1 for first symbol, \$2 to second ...

10/19/23

82

## Example - Base types

```
(* File: expr.ml *)
type expr =
  Term_as_Expr of term
  | Plus_Expr of (term * expr)
  | Minus_Expr of (term * expr)
and term =
  Factor_as_Term of factor
  | Mult_Term of (factor * term)
  | Div_Term of (factor * term)
and factor =
  Id_as_Factor of string
  | Parenthesized_Expr_as_Factor of expr
```

10/19/23

83

## Example - Lexer (exprlex.mll)

```
{ (*open Exprparse*) }
let numeric = ['0' - '9']
let letter = ['a' - 'z' 'A' - 'Z']
rule token = parse
  | "+" {Plus_token}
  | "-" {Minus_token}
  | "*" {Times_token}
  | "/" {Divide_token}
  | "(" {Left_parenthesis}
  | ")" {Right_parenthesis}
  | letter (letter|numeric|"_")* as id {Id_token id}
  | [' ' '\t' '\n'] {token lexbuf}
  | eof {EOL}
```

10/19/23

84

## Example - Parser (exprparse.mly)

```
%{ open Expr
%}
%token <string> Id_token
%token Left_parenthesis Right_parenthesis
%token Times_token Divide_token
%token Plus_token Minus_token
%token EOL
%start main
%type <expr> main
%%
```

10/19/23

85

## Example - Parser (exprparse.mly)

```
expr:
  term
  { Term_as_Expr $1 }
| term Plus_token expr
  { Plus_Expr ($1, $3) }
| term Minus_token expr
  { Minus_Expr ($1, $3) }
```

10/19/23

86

## Example - Parser (exprparse.mly)

```
term:
  factor
  { Factor_as_Term $1 }
| factor Times_token term
  { Mult_Term ($1, $3) }
| factor Divide_token term
  { Div_Term ($1, $3) }
```

10/19/23

87

## Example - Parser (exprparse.mly)

```
factor:
  Id_token
  { Id_as_Factor $1 }
| Left_parenthesis expr Right_parenthesis
  { Parenthesized_Expr_as_Factor $2 }
main:
  | expr EOL
  { $1 }
```

10/19/23

88

## Example - Using Parser

```
# #use "expr.ml";;
...
# #use "exprparse.ml";;
...
# #use "exprlex.ml";;
...
# let test s =
  let lexbuf = Lexing.from_string (s^"\n") in
  main token lexbuf;;
```

10/19/23

89

## Example - Using Parser

```
# test "a + b";;
- : expr =
Plus_Expr
(Factor_as_Term (Id_as_Factor "a"),
Term_as_Expr (Factor_as_Term
(Id_as_Factor "b")))
```

10/19/23

90

## LR Parsing

- Read tokens left to right (L)
- Create a rightmost derivation (R)
- How is this possible?
- Start at the bottom (left) and work your way up
- Last step has only one non-terminal to be replaced so is right-most
- Working backwards, replace mixed strings by non-terminals
- Always proceed so that there are no non-terminals to the right of the string to be replaced

10/19/23

92

Example:  $\langle \text{Sum} \rangle = 0 \mid 1 \mid (\langle \text{Sum} \rangle)$   
 $\mid \langle \text{Sum} \rangle + \langle \text{Sum} \rangle$

$\langle \text{Sum} \rangle \Rightarrow$

$= \bullet (0 + 1) + 0$       shift

10/19/23

93

Example:  $\langle \text{Sum} \rangle = 0 \mid 1 \mid (\langle \text{Sum} \rangle)$   
 $\mid \langle \text{Sum} \rangle + \langle \text{Sum} \rangle$

$\langle \text{Sum} \rangle \Rightarrow$

$= (\bullet 0 + 1) + 0$       shift  
 $= \bullet (0 + 1) + 0$       shift

10/19/23

94

Example:  $\langle \text{Sum} \rangle = 0 \mid 1 \mid (\langle \text{Sum} \rangle)$   
 $\mid \langle \text{Sum} \rangle + \langle \text{Sum} \rangle$

$\langle \text{Sum} \rangle \Rightarrow$

$\Rightarrow (0 \bullet + 1) + 0$       reduce  
 $= (\bullet 0 + 1) + 0$       shift  
 $= \bullet (0 + 1) + 0$       shift

10/19/23

95

Example

$$( 0 + 1 ) + 0$$

10/19/23

108

Example

$$( 0 + 1 ) + 0$$

10/19/23

109

Example

$$\left( \begin{array}{c} \langle \text{Sum} \rangle \\ | \\ 0 \end{array} + 1 \right) + 0$$

10/19/23

110

Example

$$\left( \begin{array}{c} \langle \text{Sum} \rangle \\ | \\ 0 \end{array} + \begin{array}{c} 1 \end{array} \right) + 0$$

10/19/23

111

Example

$$\left( \begin{array}{c} \langle \text{Sum} \rangle \\ | \\ 0 \end{array} + 1 \right) + 0$$

10/19/23

112

Example

$$\left( \begin{array}{c} \langle \text{Sum} \rangle \\ | \\ 0 \end{array} + \begin{array}{c} \langle \text{Sum} \rangle \\ | \\ 1 \end{array} \right) + 0$$

121

## LR Parsing Tables

- Build a pair of tables, Action and Goto, from the grammar
  - This is the hardest part, we omit here
  - Rows labeled by states
  - For Action, columns labeled by terminals and “end-of-tokens” marker
    - (more generally strings of terminals of fixed length)
  - For Goto, columns labeled by non-terminals

10/19/23

122

## Action and Goto Tables

- Given a state and the next input, Action table says either
  - shift** and go to state  $n$ , or
  - reduce** by production  $k$  (explained in a bit)
  - accept** or **error**
- Given a state and a non-terminal, Goto table says
  - go to state  $m$

10/19/23

123

## LR(i) Parsing Algorithm

- Based on push-down automata
- Uses states and transitions (as recorded in Action and Goto tables)
- Uses a stack containing states, terminals and non-terminals

10/19/23

124

## LR(i) Parsing Algorithm

0. Insure token stream ends in special “end-of-tokens” symbol
1. Start in state 1 with an empty stack
2. Push **state**(1) onto stack
- 3. Look at next  $i$  tokens from token stream (*toks*) (don't remove yet)
4. If top symbol on stack is **state**( $n$ ), look up action in Action table at ( $n$ , *toks*)

10/19/23

125

## LR(i) Parsing Algorithm

5. If action = **shift**  $m$ ,
- a) Remove the top token from token stream and push it onto the stack
  - b) Push **state**( $m$ ) onto stack
  - c) Go to step 3

10/19/23

126

## LR(i) Parsing Algorithm

6. If action = **reduce**  $k$  where production  $k$  is  $E ::= u$
- a) Remove  $2 * \text{length}(u)$  symbols from stack ( $u$  and all the interleaved states)
  - b) If new top symbol on stack is **state**( $m$ ), look up new state  $p$  in  $\text{Goto}(m, E)$
  - c) Push  $E$  onto the stack, then push **state**( $p$ ) onto the stack
  - d) Go to step 3

10/19/23

127

## LR(i) Parsing Algorithm

7. If action = **accept**
- Stop parsing, return success
8. If action = **error**,
- Stop parsing, return failure

10/19/23

128

## Adding Synthesized Attributes

- Add to each **reduce** a rule for calculating the new synthesized attribute from the component attributes
- Add to each non-terminal pushed onto the stack, the attribute calculated for it
- When performing a **reduce**,
  - gather the recorded attributes from each non-terminal popped from stack
  - Compute new attribute for non-terminal pushed onto stack

10/19/23

129

## Shift-Reduce Conflicts

- **Problem:** can't decide whether the action for a state and input character should be **shift** or **reduce**
- Caused by ambiguity in grammar
- Usually caused by lack of associativity or precedence information in grammar

10/19/23

130

Example:  $\langle \text{Sum} \rangle = 0 \mid 1 \mid (\langle \text{Sum} \rangle)$   
 $\mid \langle \text{Sum} \rangle + \langle \text{Sum} \rangle$

●	0	+	1	+	0		shift
->	0	●	+	1	+	0	reduce
->	$\langle \text{Sum} \rangle$	●	+	1	+	0	shift
->	$\langle \text{Sum} \rangle$	+	●	1	+	0	shift
->	$\langle \text{Sum} \rangle$	+	1	●	+	0	reduce
->	$\langle \text{Sum} \rangle$	+	$\langle \text{Sum} \rangle$	●	+	0	

10/19/23

131

## Example - cont

- **Problem:** shift or reduce?
- You can shift-shift-reduce-reduce or reduce-shift-shift-reduce
- Shift first - right associative
- Reduce first- left associative

10/19/23

132

## Reduce - Reduce Conflicts

- **Problem:** can't decide between two different rules to reduce by
- Again caused by ambiguity in grammar
- **Symptom:** RHS of one production suffix of another
- Requires examining grammar and rewriting it
- Harder to solve than shift-reduce errors

10/19/23

133

## Example

- $S ::= A \mid aB$      $A ::= abc$      $B ::= bc$

● abc            shift  
a ● bc           shift  
ab ● c           shift  
abc ●

- Problem: reduce by  $B ::= bc$  then by  $S ::= aB$ , or by  $A ::= abc$  then  $S ::= A$ ?
