Applied Machine Learning (CS 441) – Spring 2023

Instructor: Derek Hoiem (dhoiem)
TAs:
- Vatsal Chheda (vchheda2)
- Joshua Levine (joshua45)
- Weijie Lyu (wlyu3)
- Kshitij Phulare (phulare2)
- Yuqun Wu (yuqunwu2)
- Mingtong Zhang (mz62)
- Wentao Zhang (wentao4)

Lectures: Tues/Thurs 9:30-10:45, 1002 ECE Building

Overview
Machine learning (ML) algorithms convert raw data into predictive models or insights. ML is used for speech recognition, driving safety, compression, data analytics, ad recommendation, photo enhancement, robotics, gaming, and more. Application of ML is changing our lives daily, and masters of ML are the wizards of the information age.

Course Objectives
This course teaches how to use machine learning techniques to solve a wide variety of problems. By the end of this course, you should have a strong grasp of the general principles of machine learning, including familiarity with common approaches, assumptions, and methodologies. You should be able to assess the strengths, weaknesses, and use cases of ML algorithms, and to select and apply the right tools for custom classification, regression, and analysis problems. You should be able to talk intelligently about modern applications to computer vision, language, and audio, including ethical concerns about applications of ML. These capabilities will be developed through practical exercises and projects, guided by lectures covering a wide range of topics, and reinforced in exams.

Prerequisites
You should enter the course with basic programming skills and a working knowledge of linear algebra, probability/statistics, and calculus. Previous experience with Python will be very helpful but is not required.

Assignments and Grading
Grading is based on assignments, midterm, and the final exam:
- Homeworks and Final Project: 80%
- Exams: 20%
  - Midterm: 10%
  - Final: 10%
Assignments (80%): There are four project-based homeworks, each with a “core” worth 100 points. Each homework also has “stretch goals” that give you the opportunity to explore projects of interest at greater depth and earn additional points. The final project is worth 100 points, which can either be an individual or team project on one of a few challenges, or a custom team project. The number of required points depends on whether you are enrolled in the 3 credit undergraduate or 4 credit graduate version of the course:

- 3 credit: 425 points required, max of 15 points extra credit
- 4 credit: 525 points required, max of 15 points extra credit

In final grade computation, only the total matters. If you are in the 3 credit course, you could potentially skip the final project by completing more stretch goals, or skip some parts of homework and complete the project. Assignments that are not submitted within two weeks of the deadline will receive 0 points. You can earn a small amount of extra credit (to make up for lost points on exams) if you earn more total points than required.

Midterm Exam (10%): The midterm will cover materials up to and including the week 7 lectures. The midterms and final exams are planned to be open book and administered using PrairieLearn, but this is tentative.

Final exam (10%): The final exam will cover the entire semester. If your final exam grade is higher than your midterm, it will replace your midterm grade in the final course grade calculation.

Grade calculation:

- 3 credit: \( \min(hw1 + hw2 + hw3 + hw4 + final\_proj, 440) / 425 \cdot 80 + \max(midterm, final) / 100 \cdot 10 + final / 100 \cdot 10 \)
- 4 credit: \( \min(hw1 + hw2 + hw3 + hw4 + final\_proj, 540) / 525 \cdot 80 + \max(midterm, final) / 100 \cdot 10 + final / 100 \cdot 10 \)

Where \( hw1-4 \) are the assignments, worth 0 to 100+ points, final_proj is the final project grade worth 0 to 100 points, and the midterm and final are exams worth 0 to 100 points.

Letter grades will be assigned based on the following thresholds. Thresholds may be lowered (but not raised) if warranted by the grade distribution, but large changes are not expected.

Late policy: Aim to get all projects in on time to stay on track in the course. You have a total of ten free late days for regular projects. Use them wisely. Additional late days come at a penalty of five project points per day late. To receive any credit, your project must be submitted within two weeks of the deadline, with no exceptions, regardless of whether you use free late days. The reason for this is to ensure that the class is roughly in sync. You have a short grace period for the submission deadline, e.g. a project submitted less than one hour late will not count as late. The final project cannot be submitted late.

Absence policy: In-person lecture attendance is encouraged, but we are planning to make lectures and exams available remotely. Please stay home if you are sick to avoid spreading. Contact the instructor by email if you have a serious illness or hospitalization that requires accommodation. See Part 5, 1-501 of the Student Code for detail.

Changes from assignment and grading policies in syllabus: While I try to transparent and predictable, this is the first offering of this version of the course. As such, I maintain the right to make any changes that I deem in the best interest of the students as a whole, and will communicate any changes as promptly as possible.
Academic Integrity
You are welcome to discuss homework and projects with your classmates, but do not show or share any code. Also, you may not use any code from the Internet or any other outside sources, unless it is specifically approved by the instructor. Be sure to acknowledge any help that you do get from other students or outside works, even if it’s just a small suggestion. *Violations will go on record at the university, and the minimum penalty will be a zero for the entire assignment.* See [http://studentcode.illinois.edu/](http://studentcode.illinois.edu/).

General Information

**Textbook:** The lectures are not directly based on any textbook, but will point you to relevant readings from David Forsyth’s *Applied Machine Learning*, which is considered our primary text, or other online resources. The AML book is really quite good and worth reading, even for parts not covered in lectures.

- David Forsyth, *Applied Machine Learning*. Springer International Publishing, 2019. Available at the University of Illinois Library ([https://www.library.illinois.edu](https://www.library.illinois.edu)). Follow the link to “SpringerLink - Full text online” to download the PDF. You can use this proxy link to log in the University of Illinois Library with your Illinois credentials and download the book: [https://link-springer-com.proxy2.library.illinois.edu/book/10.1007/978-3-030-18114-7](https://link-springer-com.proxy2.library.illinois.edu/book/10.1007/978-3-030-18114-7).

To obtain **disability-related academic adjustments** and/or auxiliary aids, students with disabilities must contact the course instructor and the as soon as possible. To ensure that disability-related concerns are properly addressed from the beginning, students with disabilities who require assistance to participate in this class should contact Disability Resources and Educational Services (DRES) and see the instructor as soon as possible. If you need accommodations for any sort of disability, please speak to me after class, or make an appointment to see me or see me during my office hours. DRES provides students with academic accommodations, access, and support services. To contact DRES you may visit 1207 S. Oak St., Champaign, call 333-4603 (V/TDD), or e-mail [disability@illinois.edu](mailto:disability@illinois.edu). [http://www.disability.illinois.edu/](http://www.disability.illinois.edu/).

**Mental Health:** Significant stress, mood changes, excessive worry, substance/alcohol misuse or interferences in eating or sleep can have an impact on academic performance, social development, and emotional wellbeing. The University of Illinois offers a variety of confidential services including individual and group counseling, crisis intervention, psychiatric services, and specialized screenings which are covered through the Student Health Fee. If you or someone you know experiences any of the above mental health concerns, it is strongly encouraged to contact or visit any of the University’s resources provided below. Getting help is a smart and courageous thing to do for yourself and for those who care about you.

- Counseling Center (217) 333-3704
- McKinley Health Center (217) 333-2700
- National Suicide Prevention Lifeline (800) 273-8255
- Rosecrance Crisis Line (217) 359-4141 (available 24/7, 365 days a year)

If you are in immediate danger, call 911.
