

Greetings!

We hope your preparations for final exams are going well. Below are a few items that can help the end-of-semester finish well.

**Final Exam:** Confirm the final exam date/time and location in the course [grade book](#). Be sure that you are checking the location for your exam date. The special conflict exam on Friday morning will be in 276 Loomis; room assignments are currently available for the Monday combined exam. Room assignments for the Thursday conflict will be posted by the end of the reading day. Approximately 700 students are assigned to take the exam on Monday in Foellinger Auditorium, either on the main floor (AUD) or the balcony (BAL). This can be a bit chaotic, so in order to facilitate the process, you can check in and get your exam at any door on your assigned floor (AUD = main level, BAL = balcony). When you checkout, we will ask that you checkout according to your discussion section. In order to make this go smoother, we have placed a [pdf](#) on the course homepage showing the Foellinger layout and where you will check out based on your discussion. Remember to bring extra pencils, your calculator, and your ID (just like the midterms).

**Office Hours:** Office hours officially ended on Wednesday, but several of your TAs have generously volunteered to hold office hours during on Thursday(5/8) and Friday(5/9) of this week. The times are available from the [office hour schedule](#) link on our course homepage. There will not be any office hours after Friday.

**Course Grade:** After the finals are complete, your grade will be calculated based on the scores recorded in the course gradebook. Please take a minute and confirm that all of your grades are correct. The most common issue is that a lab, discussion, or exam that you were meant to be excused from is marked with a 0 or ABS instead of EX. Please write to the appropriate instructor to have this fixed (lab or discussion TA for labs and discussion, lecturer for exam or homework).

Final exams are stressful for everyone, so do your best to eat, sleep, and get some exercise and fresh air. These will all help you perform your best.

Thanks for a great semester and good luck with all of your finals!

Sangjin and Tim (on behalf of the entire Physics 211 team).
