Hi Celia,

I saw that you put this paper on the agenda for tomorrow's class. How much time were you thinking we would spend on it?

Thanks,
Jessica

---

Thanks, Jessica. Another thing I wish we had had time to discuss last week was so-called predatory publishing. Taylor, would you want to make a few remarks about that this week?

I've made a note to add citation bias to my lecture on referencing for next semester, and I think we could mention it as a stand-alone discussion this semester, using the recent Nature Physics article as a jumping-off point. I'll look to see where we can shoehorn it into the class schedule. Jessica, would you want to lead the discussion?

Celia

Hi Team,

I wanted to bring this paper to your attention in case you haven't seen it. I've mentioned in past semesters that the body of research on citation bias is growing across several scientific disciplines. Here is the latest installment in physics.

Citation inequity and gendered citation practices in contemporary physics | Nature Physics

The under-attribution of women’s contributions to scientific scholarship is well known and well studied. One measure of this under-attribution is the citation gap between men and women: the ...

www.nature.com

Perhaps we can add this to the mix of ethics discussions in our class?

Jessica
