

Write a public static method that takes an array of strings, and formats them as a comma-separated list written in English (i.e., if there are more than two items, an ‘and’ is inserted before the last item). For example:

`new String[]{"thing1", "thing2", "thing3"} -> "thing1, thing2, and thing3"`

```
public static String toString(String [] array) {
```

Reminders

1. Code review section assignments are available at: https://subversion.ews.illinois.edu/svn/fa17-cs126/YOURNETID/moderator_assignment
2. Our first coding assignment is due Wednesday night (11:59pm).
3. Expect a short naming re-factoring assignment soon, based on Chapters 2 and 3 of the book.
