

#37: DFS and Minimum Spanning Trees (MST)

November 18, 2019 \cdot *G Carl Evans*

Graph Traversal – BFS

Big Ideas: Utility of a BFS Traversal

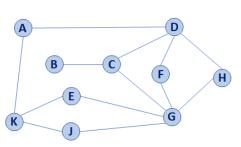

Obs. 1: Traversals can be used to count components. **Obs. 2:** Traversals can be used to detect cycles. **Obs. 3:** In BFS, **d** provides the shortest distance to every vertex.

Obs. 4: In BFS, the endpoints of a cross edge never differ in distance, d, by more than 1: |d(u) - d(v)| = 1

DFS Graph Traversal

Idea: Traverse deep into the graph quickly, visiting more distant nodes before neighbors.

Two types of edges:

Modifying BFS to create DFS BFS(G): Input: Graph, G Output: A labeling of the edges on G as discovery and cross edges foreach (Vertex v : G.vertices()): setLabel(v, UNEXPLORED) foreach (Edge e : G.edges()): setLabel(e, UNEXPLORED)

9 setLabel(e, UNEXPLORED)
10 foreach (Vertex v : G.vertices()):
11 if getLabel(v) == UNEXPLORED:

- 12 BFS(G, v) 13 14 BFS(G, v):
- 15 Queue q
- 16 setLabel(v, VISITED)
 17 g.enqueue(v)

 - while !q.empty():
 - v = q.dequeue()
 foreach (Vertex w : G.adjacent(v)):
 - if getLabel(w) == UNEXPLORED:
 - setLabel(v, w, DISCOVERY)
 setLabel(w, VISITED)
 g.engueue(w)
- 25 q.enqueue(w) 26 elseif getLabel(v, w) == UNEXPLORED:
- 27 setLabel(v, w, CROSS)

Minimum Spanning Tree

"The Muddy City" by CS Unplugged, Creative Commons BY-NC-SA 4.0

A **Spanning Tree** on a connected graph **G** is a subgraph, **G'**, such that:

- 1. Every vertex is G is in G' and
- 2. G' is connected with the minimum number of edges

This construction will always create a new graph that is a _____ (connected, acyclic graph) that spans G.

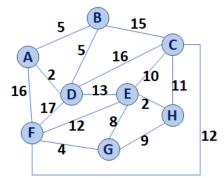

A **Minimum Spanning Tree** is a spanning tree with the **minimal total edge weights** among all spanning trees.

- Every edge must have a weight
 - The weights are unconstrained, except they must be additive (eg: can be negative, can be non-integers)
- Output of a MST algorithm produces G':
 - G' is a spanning graph of G
 - G' is a tree

G' has a minimal total weight among all spanning trees. There may be multiple minimum spanning trees, but they will have the same total weight.

Pseudocode for Kruskal's MST Algorithm	
1	KruskalMST(G):
2	DisjointSets forest
3	foreach (Vertex v : G):
4	forest.makeSet(v)
5	
6	PriorityQueue Q // min edge weight
7	foreach (Edge e : G):
8	Q.insert(e)
9	
10	Graph $T = (V, \{\})$
11	
12	while $ T.edges() < n-1$:
13	Vertex $(u, v) = Q.removeMin()$
14	<pre>if forest.find(u) == forest.find(v):</pre>
15	T.addEdge(u, v)
16	<pre>forest.union(forest.find(u) ,</pre>
17	<pre>forest.find(v))</pre>
18	
19	return T

CS 225 – Things To Be Doing:

- **1. Programming Exam C is different than usual schedule:** Exam: Monday, Dec 2 – Wednesday, Dec 4
- **2.** MP6 due tonight; MP7 released tomorrow
- **3.** lab_ml this week in lab
- **4.** Daily POTDs are ongoing for +1 point /problem
