

## **BTree Motivation**

Can we always fit our data in main memory?

Where else do we keep our data?

**vs.** CPU: 3 GHz == 3m ops / \_\_\_\_\_ \* \_\_\_ cores

# **AVL Operations on Disk:**

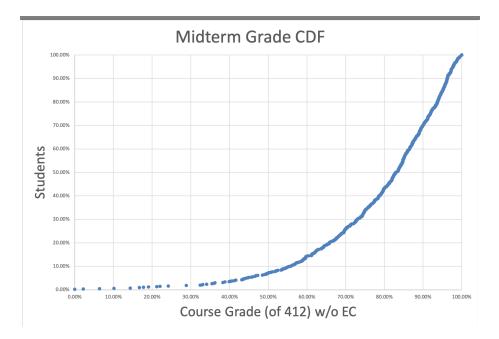

How deep do AVL trees get?

# **BTree Motivations**

Knowing that we have long seek times for data, we want to build a data structure with two (related) properties:

1.

#### **BTree**<sub>m</sub>

-3 8 23 25 31 42 43 55
------------------------

**Goal:** Build a tree that uses \_\_\_\_\_/node! \_\_\_\_\_/node! \_\_\_\_\_/note! \_\_\_\_\_/note!

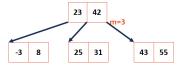

A **BTree of order m** is an m-way tree where:

1. All keys within a node are ordered.

## BTree Insert, using m=5

...when a BTree node reaches **m** keys:

## BTree Insert, m=3:

#### **Great interactive visualization of BTrees:**

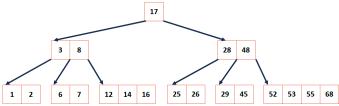

https://www.cs.usfca.edu/~galles/visualization/BTree.html

## **BTree Properties**

For a BTree of order **m**:

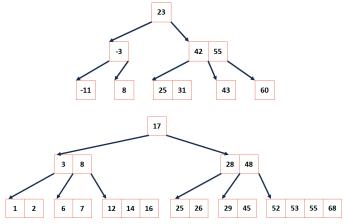

- 1. All keys within a node are ordered.
- 2. All leaves contain no more than **m-1** nodes.
- 3. All internal nodes have exactly **one more key than children**.
- 4. Root nodes can be a leaf or have [2, m] children.
- 5. All non-root, internal nodes have [ceil(m/2), m] children.
- 6. All leaves are on the same level.

## **Example BTree**

What properties do we know about this BTree?

### **BTree Search**

# CS 225 - Things To Be Doing:

- mp\_traveral extra credit ongoing (final deadline Monday, March. 23rd)
- 2. lab\_avl released this week; course feedback in lab this week!
- 3. Daily POTDs are ongoing!
