Learning Objectives

Introduce the fundamental search problem

Introduce and implement binary search

Review hash tables, sorting, and search

The Search Problem

Given a collection of objects, C , with comparable values and an object of interest, q , find the first instance of $q \in C$.

Input:

4	5	6	7	8	9	10	11	12	13
---	---	---	---	---	---	----	----	----	----

Output:

Index of q if it exists, -1 otherwise

Naive Linear Search

```
1 def naive_linear(inList, val):  
2  
3     for i, obj in enumerate(inList):  
4  
5         if val == obj:  
6  
7             return i  
8  
9  
10  
11  
12  
13  
14  
15  
16  
17  
18  
19  
20  
21  
22  
23
```

6	1	0	3	7	9	2	4
---	---	---	---	---	---	---	---

Naive Sorted Search

Find(3)

0	1	2	4	5	6	7	8	9	10
---	---	---	---	---	---	---	---	---	----

Naive Sorted Search

```
1 def naive_sorted(inList, val):
2
3     for i, obj in enumerate(inList):
4
5         if val == obj:
6
7             return i
8
9         elif val > obj:
10
11             return -1
12
13
14
15
16
17
18
19
20
21
22
23
```

0	1	2	3	4	6	7	9
---	---	---	---	---	---	---	---

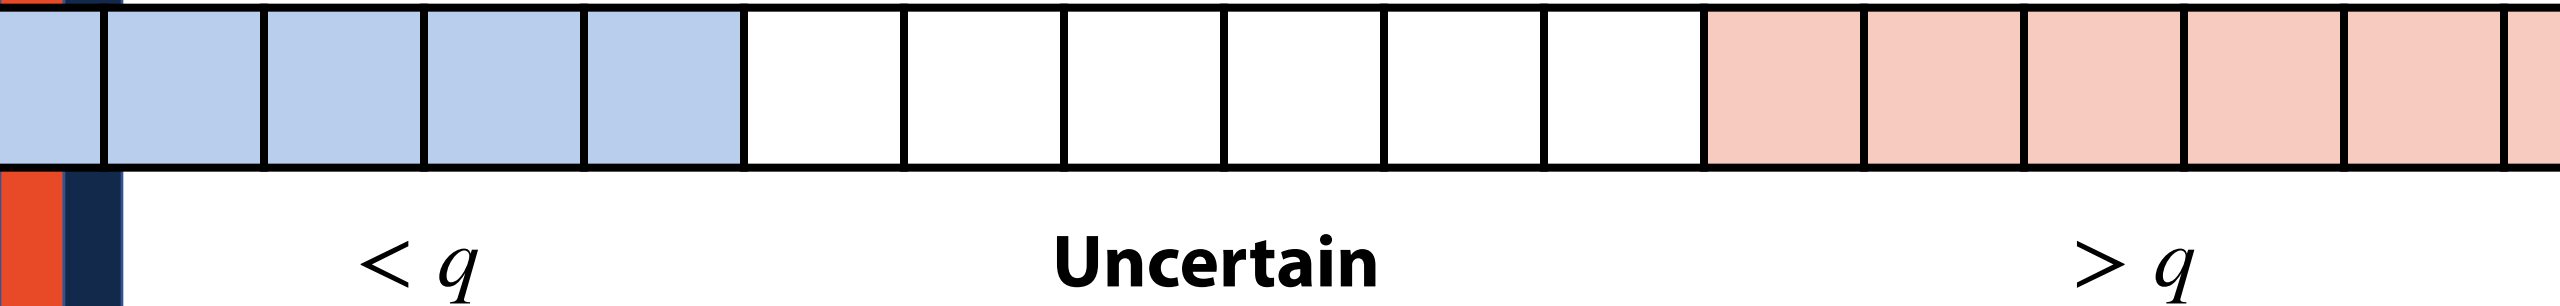

Binary Search

Find(7)

0	1	2	3	4	5	6	7	8	9
---	---	---	---	---	---	---	---	---	---

Binary Search

A binary search (for object q) partitions the search space into three regions

If we are looking for q , where might we find it?

How can we track this information?

Binary Search

1	3	5	6	7	8	9
---	---	---	---	---	---	---

1	3	5	6	7	8	9
---	---	---	---	---	---	---

Find (8)

- 1. Find midpoint**
- 2. Compare midpoint**
- 3. Update range**

Binary Search

Find(18)

1	3	5	6	7	10	12	14	18
---	---	---	---	---	----	----	----	----

1. Find midpoint

1	3	5	6	7	10	12	14	18
---	---	---	---	---	----	----	----	----

2. Compare midpoint

1	3	5	6	7	10	12	14	18
---	---	---	---	---	----	----	----	----

3. Update range

1	3	5	6	7	10	12	14	18
---	---	---	---	---	----	----	----	----

Binary Search

Find(4)

1	3	5	6	7	10	12	14	18
---	---	---	---	---	----	----	----	----

1. Find midpoint

1	3	5	6	7	10	12	14	18
---	---	---	---	---	----	----	----	----

2. Compare midpoint

1	3	5	6	7	10	12	14	18
---	---	---	---	---	----	----	----	----

3. Update range

1	3	5	6	7	10	12	14	18
---	---	---	---	---	----	----	----	----

Recursive Binary Search

0	3	7	5	8	9	2	1	4	6
---	---	---	---	---	---	---	---	---	---

Base Case:

Recursive Step:

Combining:

Binary Search

```
1 def binary_search(inList, q):
2
3
4
5
6
7
8
9

Hash Tables vs Binary Search

The hash table is generally superior for storing unordered objects

What are some situations where you can't use a hash table?

Range Search

Given a collection of objects, C , with comparable values and an object of interest, q , find the first instance(s) of $q \in C$.

ALL

Input:

0	1	2	2	2	2	2	3	4	5
---	---	---	---	---	---	---	---	---	---

Output: Range of indices matching q if it exists, $(-1, -1)$ otherwise

Binary Range Search

Find(3)

Observation: All matching values are going to be consecutive

0	2	2	2	3	3	3
---	---	---	---	---	---	---

1. Perform binary search
2. 'Extend' in both directions

Binary Range Search

Find(3)

Observation: All matching values are going to be consecutive

3	3	3	3	3	3	3
---	---	---	---	---	---	---

1. Perform binary search
2. 'Extend' in both directions

Binary Range Search

Find(3)

Observation: My search is looking for two *specific* values

2	3	3	3	3	4	4
---	---	---	---	---	---	---

1. Modify binary search to find the *first* or *last* matching value

Binary Search: Get largest match

Find(3)

```
1
2 # THIS IS PSEUDOCODE
3
4     if mid == q:
5
6         # Match case:
7         # Treat like query is smaller
8         # Remember last match!
9
10    elif mid > q:
11
12        # query is smaller case
13    else:
14
15        # query is larger case
16
17    # Final Return Snippet
18    if saw_match:
19        return last_match
20    else:
21        return -1
22
23
```

2	3	3	3	3	4	4
---	---	---	---	---	---	---

Binary Search: Get largest match

Find(2)

```
1
2 # THIS IS PSEUDOCODE
3
4     if mid == q:
5
6         # Match case:
7         # Treat like query is smaller
8         # Remember last match!
9
10    elif mid > q:
11
12        # query is smaller case
13    else:
14
15        # query is larger case
16
17    # Final Return Snippet
18    if saw_match:
19        return last_match
20    else:
21        return -1
22
23
```

2	2	2	2	2	2	4
---	---	---	---	---	---	---

Binary Search: Get smallest match

Find(3)

```
1
2 # THIS IS PSEUDOCODE
3
4     if mid == q:
5
6         # Match case:
7         # Treat like query is larger
8         # Remember last match!
9
10    elif mid > q:
11
12        # query is smaller case
13    else:
14
15        # query is larger case
16
17    # Final Return Snippet
18    if saw_match:
19        return last_match
20    else:
21        return -1
22
23
```

2	3	3	3	3	4	4
---	---	---	---	---	---	---

Binary Search: Get smallest match

Find(2)

```
1
2 # THIS IS PSEUDOCODE
3
4     if mid == q:
5
6         # Match case:
7         # Treat like query is larger
8         # Remember last match!
9
10    elif mid > q:
11
12        # query is smaller case
13    else:
14
15        # query is larger case
16
17    # Final Return Snippet
18    if saw_match:
19        return last_match
20    else:
21        return -1
22
23
```

---	---	---	---	---	---	---

Exam 2: Review Material

Stacks and Queues

Hashing (and Hash Tables)

Sorting Algorithms

Binary Search

Stack and Queue

Understand LIFO / FIFO

Know the allowable operations for a stack and queue and how to use them

Understand Big O efficiency

Hashing

What are the necessary properties of a hash function?

What are the necessary components of a hash table?

Describe some strategies for addressing hash collisions

Hashing

What is the worst case performance (Big O) of a general-use hash table?

What assumption did we use to examine the ***expected performance?***

Under that assumption, how does our load factor affect performance?

Sorting Algorithms

Understand the logic behind each one

Know the Big O of each method

Understand best case or worst case (when applicable)

Sorting Algorithm Tradeoffs

	Best Case Time	Worst Case time	Best Case Space	Worst Case Space
SelectionSort	$O(n^2)$	$O(n^2)$	$O(1)$	$O(1)$
InsertionSort	$O(n)$	$O(n^2)$	$O(1)$	$O(1)$
MergeSort	$O(n \log n)$	$O(n \log n)$	$O(n)$	$O(n)$
QuickSort	$O(n \log n)$	$O(n^2)$	$O(\log n)$	$O(n)$

What sorting algorithm would you use...?

0	1	2	3	4	5	6	7	8	9
---	---	---	---	---	---	---	---	---	---

What sorting algorithm would you use...?

9	8	7	6	5	4	3	2	1	0
---	---	---	---	---	---	---	---	---	---

Search Algorithms

Understand how to code and walk through binary search

Know the Big O of binary search
