Correctness of the MST algorithms

Algorithms \& Models of Computation
CS/ECE 374, Fall 2020
20.4.1

Safe edges must be in the MST

## Correctness of MST Algorithms

(1) Many different MST algorithms
(2) All of them rely on some basic properties of MSTs, in particular the Cut Property to be seen shortly.

## Key Observation: Cut Property

Lemma 20.1.
If $\boldsymbol{e}$ is a safe edge then every minimum spanning tree contains $\boldsymbol{e}$.
Proof
(1) Suppose (for contradiction) $e$ is not in MST $T$
(2) Since $\boldsymbol{e}$ is safe there is an $S \subset \boldsymbol{V}$ such that $\boldsymbol{e}$ is the unique min cost edge crossing S.
(3) Since $T$ is connected, there must be some edge $f$ with one end in $S$ and the other in $V \backslash S$
(0) Since $c_{f}>c_{e}, T^{\prime}=(T \backslash\{f\}) \cup\{e\}$ is a spanning tree of lower cost! Error: $T^{\prime}$ may not be a spanning tree!!

## Key Observation: Cut Property

## Lemma 20.1.

If $\boldsymbol{e}$ is a safe edge then every minimum spanning tree contains $\boldsymbol{e}$.

## Proof.

(1) Suppose (for contradiction) $\boldsymbol{e}$ is not in MST $\boldsymbol{T}$.
(2) Since $\boldsymbol{e}$ is safe there is an $S \subset V$ such that $\boldsymbol{e}$ is the unique min cost edge crossing $S$.

- Since $\boldsymbol{T}$ is connected, there must be some edge $\boldsymbol{f}$ with one end in $S$ and the other in $V \backslash S$
(1) Since $c_{f}>c_{e}, T^{\prime}=(T \backslash\{f\}) \cup\{e\}$ is a spanning tree of lower cost! may not be a spanning tree!!

## Key Observation: Cut Property

## Lemma 20.1.

If $\boldsymbol{e}$ is a safe edge then every minimum spanning tree contains $\boldsymbol{e}$.

## Proof.

(1) Suppose (for contradiction) $\boldsymbol{e}$ is not in MST $\boldsymbol{T}$.
(2) Since $\boldsymbol{e}$ is safe there is an $S \subset V$ such that $\boldsymbol{e}$ is the unique min cost edge crossing $S$.

- Since $\boldsymbol{T}$ is connected, there must be some edge $\boldsymbol{f}$ with one end in $S$ and the other in $V \backslash S$
(1) Since $\boldsymbol{c}_{\boldsymbol{f}}>\boldsymbol{c}_{e}, \boldsymbol{T}^{\prime}=(\boldsymbol{T} \backslash\{f\}) \cup\{e\}$ is a spanning tree of lower cost! Error: $\boldsymbol{T}^{\prime}$ may not be a spanning tree!!

## Error in Proof: Example

Problematic example. $S=\{1,2,7\}$, $e=(7,3), f=(1,6) . T-f+e$ is not a spanning tree.

(A) Consider adding the edge $\boldsymbol{f}$.

## Error in Proof: Example

Problematic example. $S=\{1,2,7\}$, $e=(7,3), f=(1,6) . T-f+e$ is not a spanning tree.

(A) Consider adding the edge $\boldsymbol{f}$.
(B) It is safe because it is the cheapest edge in the cut.
(B)

## Error in Proof: Example

Problematic example. $S=\{1,2,7\}$, $e=(7,3), f=(1,6) . T-f+e$ is not a spanning tree.

(A) Consider adding the edge $\boldsymbol{f}$.
(B) It is safe because it is the cheapest edge in the cut.
(C) Lets throw out the edge $\boldsymbol{e}$ currently in the spanning tree which is more expensive than $f$ and is in the same cut. Put it $f$ instead...

## Error in Proof: Example

Problematic example. $S=\{1,2,7\}$, $e=(7,3), f=(1,6) . T-f+e$ is not a spanning tree.

(A) Consider adding the edge $\boldsymbol{f}$.
(B) It is safe because it is the cheapest edge in the cut.
(C) Lets throw out the edge e currently in the spanning tree which is more expensive than $f$ and is in the same cut. Put it $f$ instead...
(D) New graph of selected edges is not a tree anymore. BUG.

## Proof of Cut Property

## Proof.

(1) Suppose $e=(v, w)$ is not in MST $T$ and $e$ is min weight edge in cut $(S, V \backslash S)$. Assume $v \in S$.
(2) $T$ is spanning tree: there is a unique path $P$ from $v$ to $w$ in $T$
(3) Let $w^{\prime}$ be the first vertex in $P$ belonging to $V \backslash S$; let $v^{\prime}$ be the vertex just before it on $P$, and let $\boldsymbol{e}^{\prime}=\left(\boldsymbol{v}^{\prime}, \boldsymbol{w}^{\prime}\right)$
© $T^{\prime}=\left(T \backslash\left\{e^{\prime}\right\}\right) \cup\{e\}$ is spanning tree of lower cost. (Why?)

## Proof of Cut Property

## Proof.

(1) Suppose $\boldsymbol{e}=(\boldsymbol{v}, \boldsymbol{w})$ is not in MST $\boldsymbol{T}$ and $\boldsymbol{e}$ is min weight edge in cut $(S, V \backslash S)$. Assume $v \in S$.
(2) $T$ is spanning tree: there is a unique path $P$ from $v$ to $w$ in $T$
(3) Let $w^{\prime}$ be the first vertex in $P$ belonging to $V \backslash S$; let $v^{\prime}$ be the vertex just before it on $P$ and let $e^{\prime}=\left(v^{\prime}, w^{\prime}\right)$

- $T^{\prime}=\left(T \backslash\left\{e^{\prime}\right\}\right) \cup\{e\}$ is spanning tree of lower cost. (Why?)

## Proof of Cut Property

## Proof.

(1) Suppose $\boldsymbol{e}=(\boldsymbol{v}, \boldsymbol{w})$ is not in MST $\boldsymbol{T}$ and $\boldsymbol{e}$ is min weight edge in cut $(S, V \backslash S)$. Assume $v \in S$.
(2) $T$ is spanning tree: there is a unique path $P$ from $v$ to $w$ in $T$
© Let $w^{\prime}$ be the first vertex in $P$ belonging to $V \backslash S$; let $v^{\prime}$ be the vertex just before it on $P$, and let $\boldsymbol{e}^{\prime}=\left(\boldsymbol{v}^{\prime}, \boldsymbol{w}^{\prime}\right)$
© $T^{\prime}=\left(T \backslash\left\{e^{\prime}\right\}\right) \cup\{e\}$ is spanning tree of lower cost. (Why?)

## Proof of Cut Property

## Proof.

(1) Suppose $\boldsymbol{e}=(\boldsymbol{v}, \boldsymbol{w})$ is not in MST $\boldsymbol{T}$ and $\boldsymbol{e}$ is min weight edge in cut $(S, V \backslash S)$. Assume $v \in S$.
(2) $T$ is spanning tree: there is a unique path $P$ from $v$ to $w$ in $T$
(3) Let $w^{\prime}$ be the first vertex in $P$ belonging to $\boldsymbol{V} \backslash \boldsymbol{S}$; let $\boldsymbol{v}^{\prime}$ be the vertex just before it on $\boldsymbol{P}$, and let $\boldsymbol{e}^{\prime}=\left(\boldsymbol{v}^{\prime}, \boldsymbol{w}^{\prime}\right)$
$T^{\prime}=\left(T \backslash\left\{e^{\prime}\right\}\right) \cup\{e\}$ is spanning tree of
lower cost. (Why?)

## Proof of Cut Property

## Proof.

(1) Suppose $\boldsymbol{e}=(\boldsymbol{v}, \boldsymbol{w})$ is not in MST $\boldsymbol{T}$ and $\boldsymbol{e}$ is min weight edge in cut $(S, V \backslash S)$. Assume $v \in S$.
(2) $T$ is spanning tree: there is a unique path $P$ from $v$ to $w$ in $T$
(3) Let $w^{\prime}$ be the first vertex in $P$ belonging to $\boldsymbol{V} \backslash \boldsymbol{S}$; let $\boldsymbol{v}^{\prime}$ be the vertex just before it on $\boldsymbol{P}$, and let $\boldsymbol{e}^{\prime}=\left(\boldsymbol{v}^{\prime}, \boldsymbol{w}^{\prime}\right)$
(4) $T^{\prime}=\left(T \backslash\left\{e^{\prime}\right\}\right) \cup\{e\}$ is spanning tree of lower cost. (Why?)

## Proof of Cut Property (contd)

Observation 20.2.
$T^{\prime}=\left(T \backslash\left\{e^{\prime}\right\}\right) \cup\{e\}$ is a spanning tree.
Proof.
$T^{\prime}$ is connected.
Removed $e^{\prime}=\left(v^{\prime}, w^{\prime}\right)$ from $T$ but $v^{\prime}$ and $w^{\prime}$ are connected by the path
$P-f+e$ in $T^{\prime}$. Hence $T^{\prime}$ is connected if $T$ is.
$T^{\prime}$ is a tree
$T^{\prime}$ is connected and has $n-1$ edges (since $T$ had $n-1$ edges) and hence $T^{\prime}$ is
a tree

## Proof of Cut Property (contd)

Observation 20.2.
$T^{\prime}=\left(T \backslash\left\{e^{\prime}\right\}\right) \cup\{e\}$ is a spanning tree.

## Proof.

$T^{\prime}$ is connected.
Removed $\boldsymbol{e}^{\prime}=\left(\boldsymbol{v}^{\prime}, w^{\prime}\right)$ from $\boldsymbol{T}$ but $\boldsymbol{v}^{\prime}$ and $w^{\prime}$ are connected by the path $P-f+e$ in $T^{\prime}$. Hence $T^{\prime}$ is connected if $T$ is.
$T^{\prime}$ is a tree
$T^{\prime}$ is connected and has $n-1$ edges (since $T$ had $n-1$ edges) and hence $T^{\prime}$ is a tree

## Proof of Cut Property (contd)

Observation 20.2.
$T^{\prime}=\left(T \backslash\left\{e^{\prime}\right\}\right) \cup\{e\}$ is a spanning tree.

## Proof.

$T^{\prime}$ is connected.
Removed $\boldsymbol{e}^{\prime}=\left(\boldsymbol{v}^{\prime}, w^{\prime}\right)$ from $\boldsymbol{T}$ but $\boldsymbol{v}^{\prime}$ and $\boldsymbol{w}^{\prime}$ are connected by the path $P-f+e$ in $T^{\prime}$. Hence $T^{\prime}$ is connected if $T$ is.
$T^{\prime}$ is a tree
$\boldsymbol{T}^{\prime}$ is connected and has $\boldsymbol{n}-1$ edges (since $\boldsymbol{T}$ had $\boldsymbol{n}-1$ edges) and hence $\boldsymbol{T}^{\prime}$ is a tree

## THE END

(for now)
