If there is a satisfying assignment, then there is a Hamiltonian cycle

From satisfying assignment to Hamiltonian cycle: By figure

3SAT formula $\varphi$ :

$$
\begin{aligned}
\varphi= & \left(x_{1} \vee \neg x_{2} \vee x_{4}\right) \\
& \wedge\left(\neg x_{1} \vee \neg x_{2} \vee \neg x_{3}\right)

## Correctness Proof

## Lemma 23.1.

$\varphi$ has a satisfying assignment $\boldsymbol{\alpha} \Longrightarrow \boldsymbol{G}_{\varphi}$ has a Hamiltonian cycle.

## Proof.

Let $\boldsymbol{a}$ be the satisfying assignment for $\varphi$. Define Hamiltonian cycle as follows

- If $\boldsymbol{\alpha}\left(\boldsymbol{x}_{\boldsymbol{i}}\right)=\mathbf{1}$ then traverse path $\boldsymbol{i}$ from left to right
- If $\boldsymbol{\alpha}\left(\boldsymbol{x}_{\boldsymbol{i}}\right)=\mathbf{0}$ then traverse path $\boldsymbol{i}$ from right to left
- For each clause, path of at least one variable is in the "right" direction to splice in the node corresponding to clause
- Clearly, resulting cycle is Hamiltonian.
