Hamiltonian cycle in undirected graph

## Hamiltonian Cycle

## Problem 23.1.

Input Given undirected graph $\boldsymbol{G}=(\boldsymbol{V}, \boldsymbol{E})$
Goal Does $G$ have a Hamiltonian cycle? That is, is there a cycle that visits every vertex exactly one (except start and end vertex)?

## NP-Completeness

Theorem 23.2.
Hamiltonian cycle problem for undirected graphs is NP-Complete.
Proof.

- The problem is in NP; proof left as exercise.
- Hardness proved by reducing Directed Hamiltonian Cycle to this problem

## Reduction Sketch

Goal: Given directed graph $\boldsymbol{G}$, need to construct undirected graph $\boldsymbol{G}^{\prime}$ such that $\boldsymbol{G}$ has Hamiltonian Path iff $\boldsymbol{G}^{\prime}$ has Hamiltonian path

## Reduction

- Replace each vertex $\mathbf{v}$ by 3 vertices: $\boldsymbol{v}_{\text {in }}, \mathbf{v}$, and $\mathbf{v}_{\text {out }}$

## Reduction Sketch

Goal: Given directed graph $\boldsymbol{G}$, need to construct undirected graph $\boldsymbol{G}^{\prime}$ such that $\boldsymbol{G}$ has Hamiltonian Path iff $\boldsymbol{G}^{\prime}$ has Hamiltonian path

## Reduction

- Replace each vertex $\boldsymbol{v}$ by 3 vertices: $\boldsymbol{v}_{\boldsymbol{i n}}, \boldsymbol{v}$, and $\boldsymbol{v}_{\text {out }}$

## Reduction Sketch

Goal: Given directed graph $\boldsymbol{G}$, need to construct undirected graph $\boldsymbol{G}^{\prime}$ such that $\boldsymbol{G}$ has Hamiltonian Path iff $\boldsymbol{G}^{\prime}$ has Hamiltonian path

## Reduction

- Replace each vertex $\boldsymbol{v}$ by 3 vertices: $\boldsymbol{v}_{\boldsymbol{i n}}, \boldsymbol{v}$, and $\boldsymbol{v}_{\text {out }}$
- A directed edge $(\boldsymbol{a}, \boldsymbol{b})$ is replaced by edge $\left(\boldsymbol{a}_{\text {out }}, \boldsymbol{b}_{\text {in }}\right)$

## Reduction Sketch

Goal: Given directed graph $\boldsymbol{G}$, need to construct undirected graph $\boldsymbol{G}^{\prime}$ such that $\boldsymbol{G}$ has Hamiltonian Path iff $\boldsymbol{G}^{\prime}$ has Hamiltonian path

## Reduction

- Replace each vertex $\boldsymbol{v}$ by 3 vertices: $\boldsymbol{v}_{\text {in }}, \boldsymbol{v}$, and $\boldsymbol{v}_{\text {out }}$
- A directed edge $\left(\boldsymbol{a}, \boldsymbol{b}^{\prime}\right)$ is replaced by edge $\left(\boldsymbol{a}_{\text {out }}, \boldsymbol{b}_{\text {in }}\right)$

Hamiltonian cycle reduction
Undirected to directed case

Hamiltonian cycle reduction

## Undirected to directed case

Hamiltonian cycle reduction

Hamiltonian cycle reduction
Undirected to directed case

## Reduction: Wrap-up

- The reduction is polynomial time (exercise)
- The reduction is correct (exercise)

## THE END

(for now)
