

Natural Modeling

CS 418

Interactive Computer Graphics

John C. Hart

von Koch Snowflake Curve

- Snowflake curve is made out of smaller copies of itself

- 4 copies
- Each $1/3$ scale

- Dimension of snowflake curve

$$D = (\log N)/(\log 1/s)$$
$$= \log 4 / \log 3 \cong 1.26$$

- Length = ∞
- Area = 0

Fractal Dimension

- Self-similarity dimension
 - Make a D dimensional object out of N smaller copies scaled by s
- | | $s=1$ | $s=1/2$ | $s=1/3$ |
|-------|------------------|-----------------------------|--|
| $D=1$ | $\overline{N=1}$ | $\overline{\overline{N=2}}$ | $\overline{\overline{\overline{N=3}}}$ |

Fractal Dimension

- Self-similarity dimension
- Make a D dimensional object out of N smaller copies scaled by s

	$s=1$	$s=1/2$	$s=1/3$
$D=1$	$\overline{N=1}$	$\overline{\overline{N=2}}$	$\overline{\overline{\overline{N=3}}}$
$D=2$			
	$N=1$	$N=4$	$N=9$

Fractal Dimension

- Self-similarity dimension
- Make a D dimensional object out of N smaller copies scaled by s

	$s=1$	$s=1/2$	$s=1/3$
$D=1$	$\overline{N=1}$	$\overline{N=2}$	$\overline{N=3}$
$D=2$	 $N=1$	 $N=4$	 $N=9$
$D=3$	 $N=1$	 $N=8$	 $N=27$

Fractal Dimension

- Self-similarity dimension
- Make a D dimensional object out of N smaller copies scaled by s

	$s=1$	$s=1/2$	$s=1/3$
$D=0$	 $N=1$	 $N=1$	 $N=1$
$D=1$	 $N=1$	 $N=2$	 $N=3$
$D=2$	 $N=1$	 $N=4$	 $N=9$
$D=3$	 $N=1$	 $N=8$	 $N=27$

Fractal Dimension

- Self-similarity dimension
- Make a D dimensional object out of N smaller copies scaled by s

$$N = (1/s)^D$$
- Can solve for dimension D

$$\log N = D \log 1/s$$

$$D = (\log N)/(\log 1/s)$$

	$s=1$	$s=1/2$	$s=1/3$
$D=0$	 $N=1$	 $N=1$	 $N=1$
$D=1$	 $N=1$	 $N=2$	 $N=3$
$D=2$	 $N=1$	 $N=4$	 $N=9$
$D=3$	 $N=1$	 $N=8$	 $N=27$

Terrain Modeling

- In nature, amplitude inversely proportional to frequency
- “Large things are farther apart”

Nimbus,
Ken Musgrave,
1987

Midpoint Subdivision

- Fournier, Fussell & Carpenter
- To make terrain, subdivide a horizontal mesh and perturb the new vertices vertically
- Amount of perturbation should be proportional to length of subdivided edge
- Random perturbations should be Gaussian (more likely zero than extreme)
- Can lead to some creasing artifacts

Carolina,
Ken Musgrave,
1989

Mesh Subdivision

- Triangle subdivision
 - three perturbed edge midpoints
 - four new triangles
- Quad subdivision
 - four edge midpoints plus one face midpoint
 - four new quads
- Cracking
 - Use same perturbation on neighboring elements to avoid cracks
 - Generate random displacement from hash function on midpoint location
