Grammar

1	goal	→	expr
2	expr	→	term - expr
3			term
4	term	→	factor * term
5			factor
6	factor	→	id

Algorithm

```

push '$'
push  $s_0$ 
token  $\leftarrow$  next_token()
repeat forever
    s  $\leftarrow$  top of stack
    if ACTION[s,token] = "reduce  $A \rightarrow \beta$ " then
        pop 2 * | $\beta$ | symbols
        s  $\leftarrow$  top of stack      /* not a pop() */
        push A
        push GOTO[s,A]
    else if ACTION[s,token] = "shift  $s_i$ " then
        push token
        push  $s_i$ 
        token  $\leftarrow$  next_token()
    else if ACTION[s, token] = "accept" and
        token = eof then
        report success
    else report a syntax error

```
