Proofs in Propositional Logic

- Natural Deduction proof is tree and a discharge function
 - Nodes are instances of inference rules
 - Leaves are assumptions of subproofs
 - Discharge function maps each leaf of the tree to an ancestor as allowed by the inference rules

- Inference rule has hypotheses and conclusion
- Conclusion a single proposition
- Hypotheses zero or more propositions, possibly with (discharged) hypotheses
- Rule with no hypotheses called an axiom
- Inference rule graphically presents as

- Inference rules associated with connectives
- Two main kinds of inference rules:
 - Introduction says how to conclude proposition made from connective is true

 Eliminations – says how to use a proposition made from connective to prove result

$$\frac{A}{B \Rightarrow A} \frac{\text{Imp I}}{A \Rightarrow (B \Rightarrow A)} \text{Imp I}$$

- Imp I (and other rules discharging assumptions) may discharge multiple instance of hypothesis
- Or may discharge none at all
- Every assumption instance discharged only once

Your Turn

Elimination Rules

- So far, have rules to "introduce" logical connectives into propositions
- No rules for how to "use" logical connectives
 - No assumptions with logical connectives
- Need "elimination" rules
- Example: Can't prove

$$(A \Rightarrow B) \Rightarrow ((B \Rightarrow C) \Rightarrow (A \Rightarrow C))$$

with what we have so far

- Elimination rules assume assumption with a connective; have general conclusion
 - Generally needs additional hypotheses

Elimination Rules

\hline
 & C & And_R E
\end{array}$

Or Elimination:

$$\begin{array}{cccc}
 & A & B \\
\vdots & \vdots \\
 & A \lor B & C & C \\
\hline
 & C &
\end{array}$$
Or E

Implication Elimination:

$$(A \Rightarrow B) \Rightarrow ((B \Rightarrow C) \Rightarrow (A \Rightarrow C))$$

Assumptions in Natural Deduction

- Problem: Keeping track of hypotheses and their discharge in Natural Deduction is HARD!
- Solution: Use sequents to track hypotheses
- A sequent is a pair of
 - A set of propositions (called assumptions, or hypotheses of sequent) and
 - A proposition (called conclusion of sequent)
- More generally (not here), allow set of hypotheses and set of conclusions
