Today's class

Mapping between image and world coordinates

- Pinhole camera model
- Projective geometry
 - Vanishing points and lines
- Projection matrix

Image formation

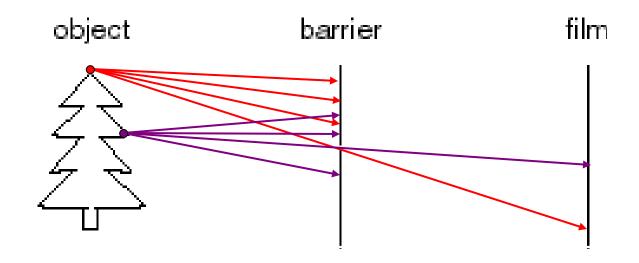

Let's design a camera

- Idea 1: put a piece of film in front of an object
- Do we get a reasonable image?

Slide source: Seitz

Pinhole camera

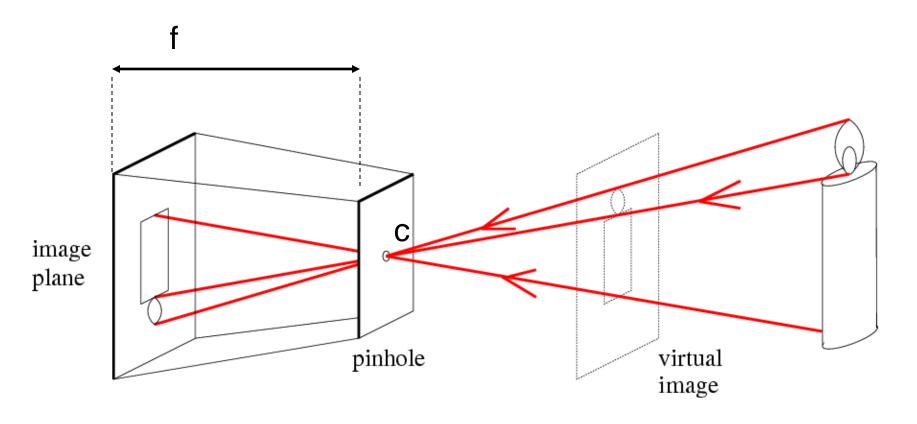

Idea 2: add a barrier to block off most of the rays

- This reduces blurring
- The opening known as the aperture

Slide source: Seitz

Pinhole camera

f = focal length
c = center of the camera

Camera obscura: the pre-camera

First idea: Mo-Ti, China (470BC to 390BC)

• First built: Alhacen, Iraq/Egypt (965 to 1039AD)

Homogeneous coordinates

Conversion

Converting to homogeneous coordinates

$$(x,y) \Rightarrow \left[egin{array}{c} x \\ y \\ 1 \end{array} \right]$$

homogeneous image coordinates

$$(x,y,z) \Rightarrow \left| egin{array}{c} x \ y \ z \ 1 \end{array} \right|$$

homogeneous scene coordinates

Converting from homogeneous coordinates

$$\begin{bmatrix} x \\ y \\ w \end{bmatrix} \Rightarrow (x/w, y/w) \qquad \begin{bmatrix} x \\ y \\ z \\ w \end{bmatrix} \Rightarrow (x/w, y/w, z/w)$$

Homogeneous coordinates

Invariant to scaling

$$k\begin{bmatrix} x \\ y \\ w \end{bmatrix} = \begin{bmatrix} kx \\ ky \\ kw \end{bmatrix} \Rightarrow \begin{bmatrix} \frac{kx}{kw} \\ \frac{ky}{kw} \end{bmatrix} = \begin{bmatrix} \frac{x}{w} \\ \frac{y}{w} \end{bmatrix}$$

Coordinates
Coordinates

Point in Cartesian is ray in Homogeneous

Basic geometry in homogeneous coordinates

• Line equation: ax + by + c = 0

$$line_i = \begin{vmatrix} a_i \\ b_i \\ c_i \end{vmatrix}$$

 Append 1 to pixel coordinate to get homogeneous coordinate

$$p_i = \begin{bmatrix} u_i \\ v_i \\ 1 \end{bmatrix}$$

Line given by cross product of two points

$$line_{ij} = p_i \times p_j$$

• Intersection of two lines given by cross product of the lines $a_{ii} = line$

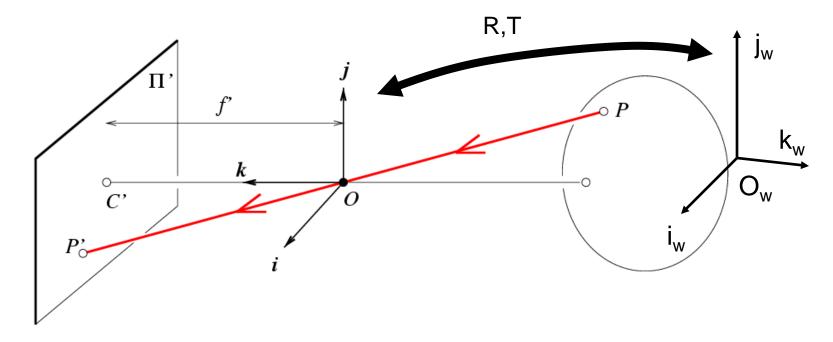

$$q_{ij} = line_i \times line_j$$

Another problem solved by homogeneous coordinates

Intersection of parallel lines

Cartesian: (Inf, Inf) Cartesian: (Inf, Inf) Homogeneous: (1, 2, 0) Homogeneous: (1, 1, 0)

Projection matrix

$$x = K[R \ t]X$$

x: Image Coordinates: w(u,v,1)

K: Intrinsic Matrix (3x3)

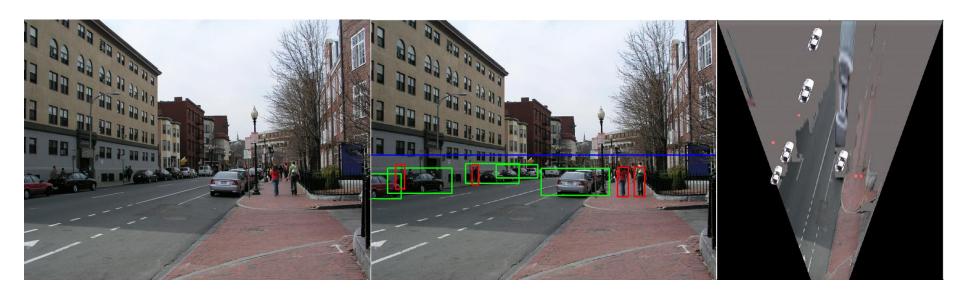

R: Rotation (3x3)

t: Translation (3x1)

X: World Coordinates: (X,Y,Z,1)

3D Rotation of Points

Rotation around the coordinate axes, counter-clockwise:

$$R_{x}(\alpha) = \begin{bmatrix} 1 & 0 & 0 \\ 0 & \cos \alpha & -\sin \alpha \\ 0 & \sin \alpha & \cos \alpha \end{bmatrix}$$

$$R_{y}(\beta) = \begin{bmatrix} \cos \beta & 0 & \sin \beta \\ 0 & 1 & 0 \\ -\sin \beta & 0 & \cos \beta \end{bmatrix}$$

$$v = \frac{fy_R}{z_R} + v_0$$

Orthographic Projection

- Special case of perspective projection
 - Distance from the COP to the image plane is infinite

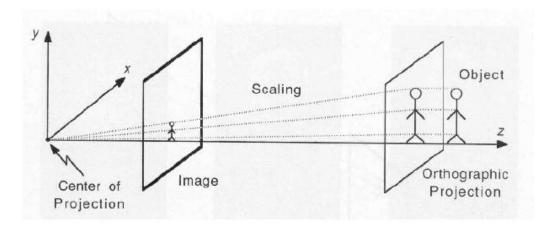

- Also called "parallel projection"
- What's the projection matrix?

$$\begin{bmatrix} u \\ v \\ w \end{bmatrix} = \begin{bmatrix} 1 & 0 & 0 & 0 \\ 0 & 1 & 0 & 0 \\ 0 & 0 & 0 & 1 \end{bmatrix} \begin{bmatrix} x \\ y \\ z \\ 1 \end{bmatrix}$$

Scaled Orthographic Projection

- Special case of perspective projection
 - Object dimensions are small compared to distance to camera

- Also called "weak perspective"
- What's the projection matrix?

$$\begin{bmatrix} u \\ v \\ w \end{bmatrix} = \begin{bmatrix} f & 0 & 0 & 0 \\ 0 & f & 0 & 0 \\ 0 & 0 & 0 & s \end{bmatrix} \begin{bmatrix} x \\ y \\ z \\ 1 \end{bmatrix}$$

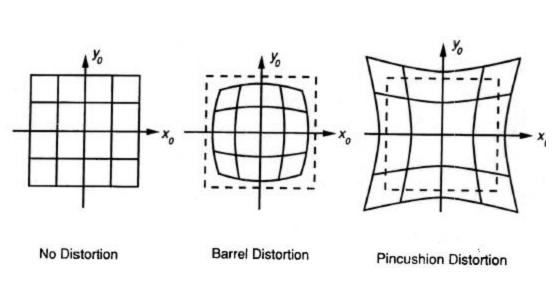

Take-home question

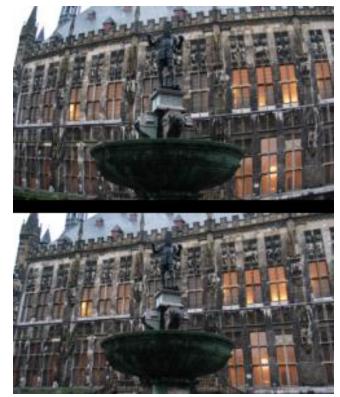

Suppose we have two 3D cubes on the ground facing the viewer, one near, one far.

- 1. What would they look like in perspective?
- 2. What would they look like in weak perspective?
