Prelab 10: Final Project

Lab 10 begins the final project development!

While you are progressing on your project, you will also continue to hone your skills in ECE 110 by completing additional **Mini-Project Modules**. You will find that many of the modules available to you are more-complex in design, but shorter in procedure. They should help immensely in your ability to improve the quality of your final project while still leaving time for project-specific design. Spend some time finding and working on modules or other resources (the Internet has many fun projects in electronics) that will enable you to complete your final project.

Question 1: What Mini-Projects or other resources did you find?

Question 2: What tasks did you complete from those resources?
