

Self-Cleaning Cat Litter Box

ECE445 Team #48

Chi Zhang, Jian Chen, Weiman Yan

TA: Xihang Wu

What is a Cat Litter Box?

- Sand Box
- Indoor
- Cats' Toilet

Why Self-Cleaning ?

Products in the market

- Problems:
 - No protection
 - Manually control
 - Waste not sealed

Nature's Miracle

T48 Smart Cat Litter Box

T48 Smart Cat Litter Box

Hand Free

Harm Free

Hassel Free

Demonstration

Waste =

Cat =

Demonstration

Cat Litter Box

Box id:1234

need to clean	Is cat in the box?	Current net weight in the box
Yes	No	0.22

Clean

Recalibrate

Hand Free

- Two Modules

- Waste Filter

- Bag Sealer

Hand Free

Hand Free

- 100% sealed
- Safe to use

Heat sealer

Hand Free

Harm Free

- Door would be closed during the cleaning process
- Weight sensors would detect whether your cat is in danger

Hassel Free

```

User Interface

- Logic and Calculation
- $\text{Current Net Weight} = \text{Current Weight} - \text{Recalibrated Weight}$
- $\text{Current Net Weight} > \text{Threshold2 (4 lbs)} \rightarrow \text{Cat is in the box}$
- Last two Measurements of the Net Weight have the difference within 0.1 lbs \rightarrow The box is stable
- $(\text{Threshold1(0.2 lbs)} < \text{Current Net Weight} < \text{Threshold2 (4 lbs)}) \ \&\& \ (\text{The box is stable}) \rightarrow \text{Need to Clean}$

PCB Design

+

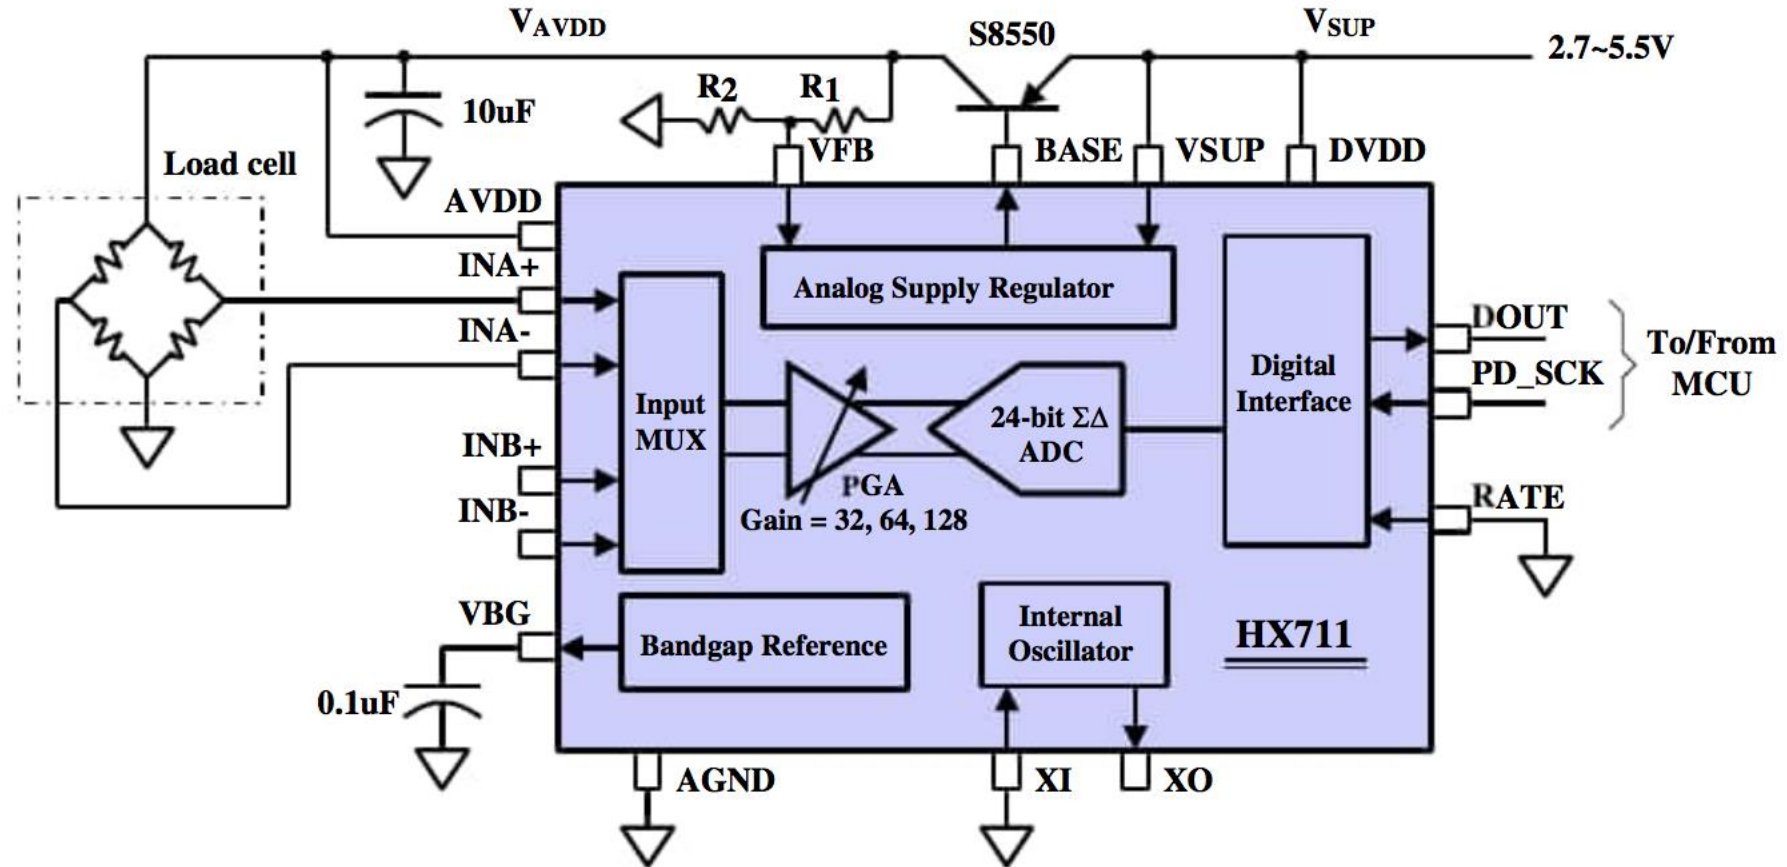

Detection Module

4 pcs load sensor with HX-711 amplifier

Detection Module

- HX711 is a precision 24-bit analog-to-digital converter (ADC) designed for weigh scales and industrial control applications to interface directly with a bridge sensor.

Hx711 circuit

- $\text{Actual Weight} = \text{Weight Transfer Slope} * \text{Input Resistance} + \text{Zero Weight Offset}$

Motor Module

- Rotatory Servo Motor
- Linear Actuator

Linear Actuator

- Two 12 inches:
 - Fully extended length 105mm
 - Load capacity 1500N
 - Speed 4mm/sec
- One 2 inches:
 - Fully extended length 18mm
 - Load capacity 100N
 - Speed 50mm/sec

Control Module

ATMEGA328p

1KB EEPROM with 2KB SRAM

ESP8266-01

Read and write data every 20 seconds

Accomplishment

- IOT function
- Integrated microcontroller with motors and weight sensor to make sure safety.
- Motors work in sequence that can successful clean the waste and seal the bag
- Design our own remote web/App

Improvement

- Design and appearance
- Make it light in weight

Design

Gear Motor

Improvement

- Noise for the weight sensor —————→ Make it stable

Improvement

- Data transmit too slow  More WI-FI Module
- Web/App improvement  Better appearance

Future work

- More sensors like IR sensors that can trace cats better.
- Find some ways like using robotic arm to automatically change the bag after sealing the bag.
