ARTIFICIAL INTELLIGENCE 3E

FOUNDATIONS OF COMPUTATIONAL AGENTS

Contents Index Home
Preface

Artificial Intelligence: Foundations of Computational Agents,
3rd Edition

David L. Poole and Alan K. Mackworth

This book is published by [Cambridge University Press](#) and the complete text is available here with permission of CUP. Please consider buying the book. The text is © 2023, [David L. [Preface](#)

Part I Agents in the World
What are Agents and How Can They be Built?

Artificial Intelligence 3E by Mackworth & Poole

- Readings will be specified for each lecture.
- Readings are optional; required material is on slides, quizzes & MPs
- Textbook is free online, so you may find its coverage of some material helpful

Webpage: <https://courses.grainger.illinois.edu/ece448>

The screenshot shows a web browser window with the following details:

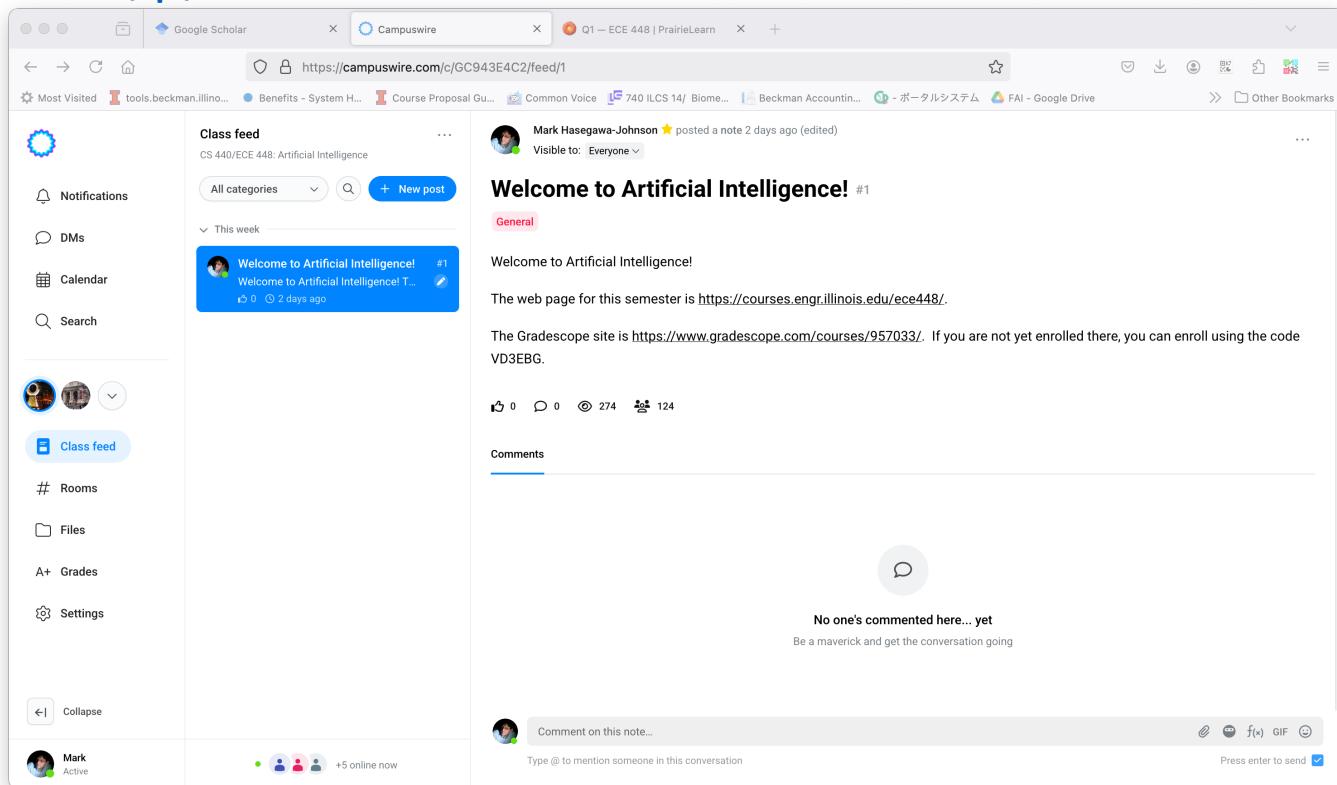

- Tab Bar:** Google Scholar, Campuswire, CS440/ECE448 Artificial Intelligence, and a blank tab.
- Address Bar:** https://courses.grainger.illinois.edu/ece448/sp2025/
- Page Title:** CS440/ECE448 Artificial Intelligence » CS440/ECE448 Artificial Intelligence, Spring 2025
- Content Area:**
 - Image:** A circular pattern of colored dots (yellow, green, blue) on a black background.
 - Section Header:** CS440/ECE448 Artificial Intelligence, Spring 2025
 - Description:** Major topics in and directions of research in artificial intelligence: basic problem solving techniques, knowledge representation and computer inference, machine learning, natural language understanding, computer vision, robotics, and societal impacts.
 - Text:** 3 undergraduate hours. 3 or 4 graduate hours. Prerequisite: CS 225; one of CS 361, STAT 361, ECE 313, MATH 362, MATH 461, MATH 463, STAT 400 or BIOE 310.
 - Section:** Contents:
 - Grades
 - Quizzes, Machine Problems, and Lectures
 - Exams
 - 4-Credit Section
 - Staff and Office Hours
 - Links
 - Section:** On-line Tools
 - MediaSpace will host recordings of all lectures.
 - CampusWire will be used for on-line question answering. The enrollment code is available in the slides for lecture 1.
 - PrairieLearn will be used for quizzes. Add yourself to this page.
 - Gradescope will be used for machine problems. The registration code is published on CampusWire.
 - PrairieTest will be used for exams. You will be enrolled by course staff prior to exam 1.
- Left Sidebar:**
 - Table of Contents: CS440/ECE448 Artificial Intelligence, Spring 2025
 - On-line Tools
 - Textbook
 - Next topic: Grades
 - This Page: Show Source
 - Quick search: A search input field with a Go button.
- Right Sidebar:** A dark sidebar with links to Other Bookmarks, next, and index.

CampusWire

Add yourself to CampusWire if you're not already added:

<https://campuswire.com/p/G490A8A0C>

Code 4136.

The screenshot shows a web browser window with the CampusWire interface. The URL in the address bar is <https://campuswire.com/c/GC943E4C2/feed/1>. The left sidebar has a gear icon and links for Notifications, DMs, Calendar, and Search. The main area is titled 'Class feed' for 'CS 440/ECE 448: Artificial Intelligence'. A post by 'Mark Hasegawa-Johnson' is visible, with the text: 'Welcome to Artificial Intelligence! #1' and 'Welcome to Artificial Intelligence! T...'. The post was made 2 days ago and has 0 likes, 274 views, and 124 participants. Below the post, a comment section says 'No one's commented here... yet'. The bottom of the screen shows a message input field with placeholder text 'Comment on this note...' and a note to 'Type @ to mention someone in this conversation'.

Grading: Quizzes, MPs, Exams, Project

- Quizzes: 20% of 3-credit grade
 - Every lecture will have a quiz. Do it in class if you can.
 - Due: 23 hours after the end of lecture.
- Machine Problems: 25% of 3-credit grade
 - There will be 12 MPs in total
 - Due: Every Friday at midnight starting 2025/01/30
- Five Exams: 55% of 3-credit grade
 - 2 in-person midterms, 2 CBTF midterms, Final will be in person
- Independent Research Project: 100% of the 4th credit
 - Information is on the course web page

More about daily quizzes

- The first one is available to you now at PrairieLearn --- see the link on the course web page labeled '21-Jan'.
- If you aren't yet signed in to the course, you can sign in to PrairieLearn using self enrollment link
https://us.prairielearn.com/pl/course_instance/206566/join/MEWZJ7K9MP with code MEW-ZJ7-K9MP
- I will usually do the quizzes together with you in lecture (e.g., I'll work on this one later in today's lecture), but not always. Even if I don't do the quiz in lecture, there is always a quiz.
- Late penalty (starting 2026/02/05): If your quiz is finished more than 23 hours late, it suffers a 20% late penalty.

- What is AI?
 - Definitions of intelligence
 - The Golem vs. Frankenstein's Monster
 - Environment

The Turing Test

‘Can machines think?’

I shall replace the question by another, which is closely related to it and is expressed in relatively unambiguous words. The object of the game for the interrogator is to determine which of the other two is the machine. The interrogator is allowed to put questions thus:

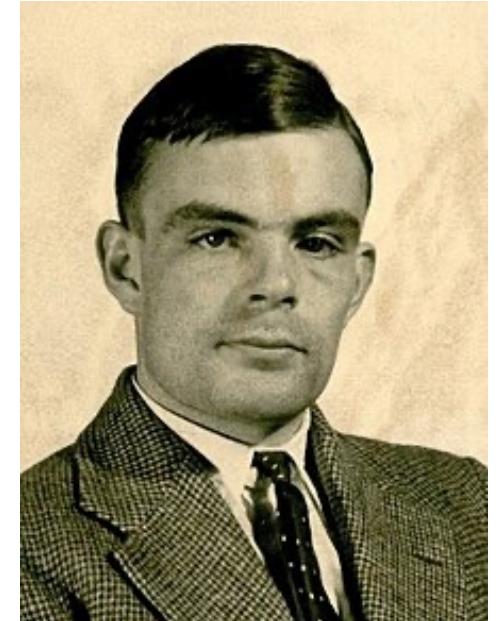

C: Will A please tell me the length of his or her hair?

It is A’s object in the game to try and cause C to make the wrong identification. His answer might therefore be:

A: My hair is shingled, and the longest strands are about nine inches long.

Will the interrogator decide wrongly? This question replaces our original, ‘Can machines think?’

- Alan Turing, 1950

Is AI intelligent?

Are ChatGPT, Claude, and/or Gemini intelligent?

Definitions of intelligence

“The ability to understand complex ideas, to adapt effectively to the environment, to learn from experience, to engage in various forms of reasoning, to overcome obstacles by taking thought.”

- American Psychological Association, 1995

“Intelligence measures an agent's ability to achieve goals in a wide range of environments.”

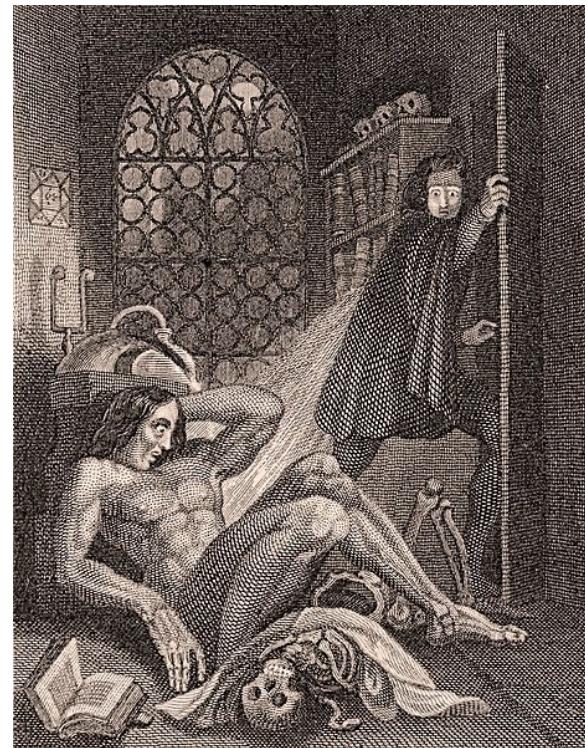

- Shane Legg and Marcus Hutter, 2007

Others: <https://en.wikipedia.org/wiki/Intelligence>

The Golem vs. Frankenstein's Monster

https://commons.wikimedia.org/wiki/File:Mdm._Tussauds_Prag_8.jpg

https://commons.wikimedia.org/wiki/File:Frontispiece_to_Frankenstein_1831.jpg

The Golem vs. Frankenstein's Monster

The Golem:

- When given a goal by its creator, completes the task, often creatively, despite unexpected obstacles
- Does not know whether its actions are good or evil
- Sometimes, lacking knowledge of the distinction, achieves good ends using evil means

Frankenstein's Monster:

- Initially inchoate; Learns to walk by stumbling about; Learns language and love by listening to the family of a farmer
- Suffers after being rejected by Dr. Frankenstein
- In despair and loneliness, takes revenge by killing Frankenstein's wife

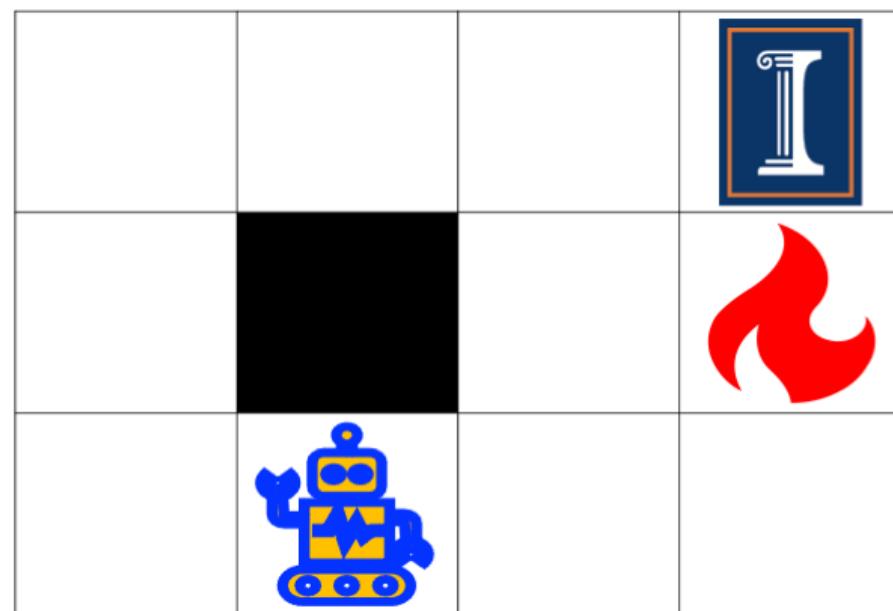

Questions to ponder

- What is understanding? Do AIs understand what they say?
- Can AI learn and use the difference between good and evil?
- If an AI invents evil means to achieve good ends, who is at fault?
- Creativity = Intentionality?

What kind of intelligence? = What kind of environment?

The environment in which an AI operates may be:

- Fully Observable vs. Partially Observable
- Deterministic vs. Stochastic
- Episodic vs. Sequential
- Static vs. Dynamic
- Discrete vs. Continuous
- Single agent vs. Multi-agent
- Known vs. Unknown

Fully observable vs. Partially observable

- Do the agent's sensors give it access to the complete state of the environment?
 - For any given world state, are the values of all the variables known to the agent?

VS.

Source: L. Zettlemoyer

Deterministic vs. Stochastic

- Is the next state of the environment completely determined by the **current state** and the **agent's action**?
 - Is the transition model **deterministic** (unique successor state given current state and action) or **stochastic** (distribution over successor states given current state and action)?
 - **strategic:** the environment is deterministic except for the actions of other agents

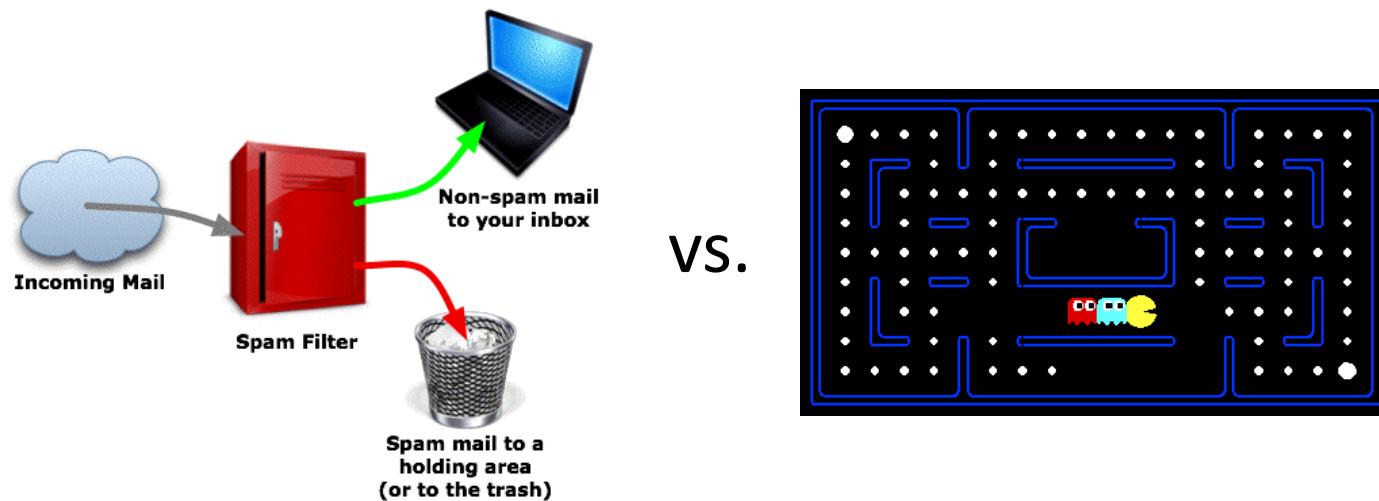

VS.

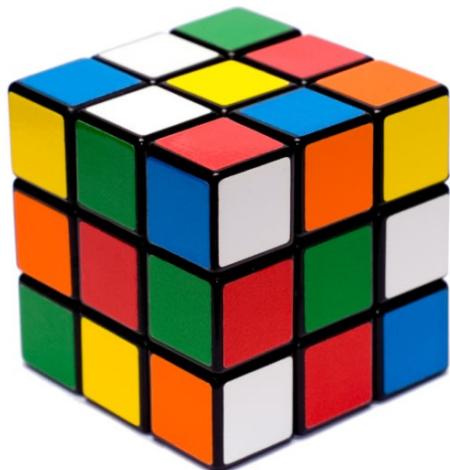

Episodic vs. Sequential

- Is the agent's experience divided into unconnected episodes, or is it a coherent sequence of observations and actions?
 - Does the agent's action change the actions that will be available to it in the future, or the states in which it will perform those actions?

Static vs. Dynamic

- Is the world changing while the agent is thinking?

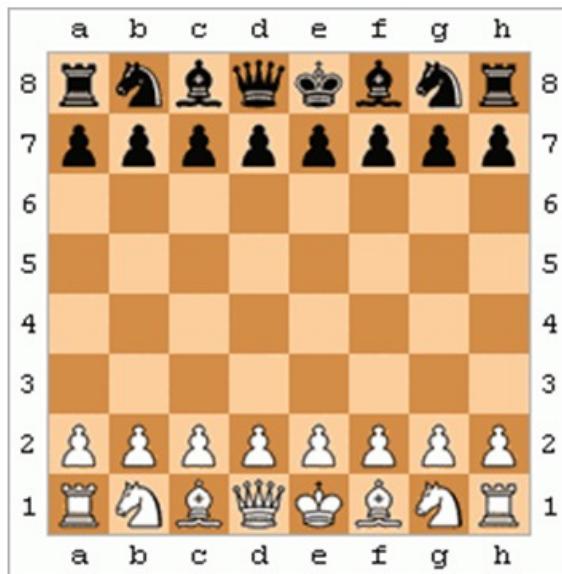

vs.

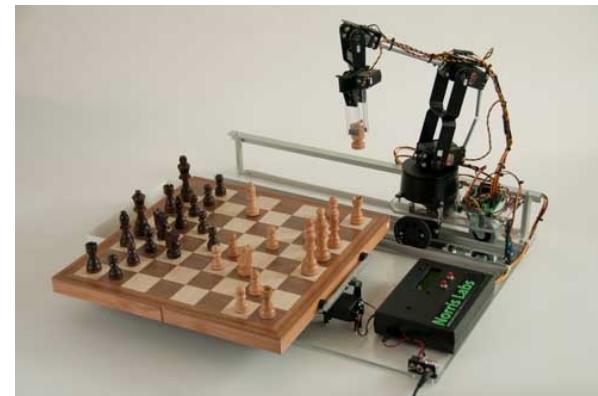

Discrete vs. Continuous

- Does the environment provide a countable (discrete) or uncountably infinite (continuous) number of distinct percepts, actions, and environment states?
 - Are the values of the state variables discrete or continuous?
 - Time can also evolve in a discrete or continuous fashion
 - “Distinct” = different values of utility

VS.

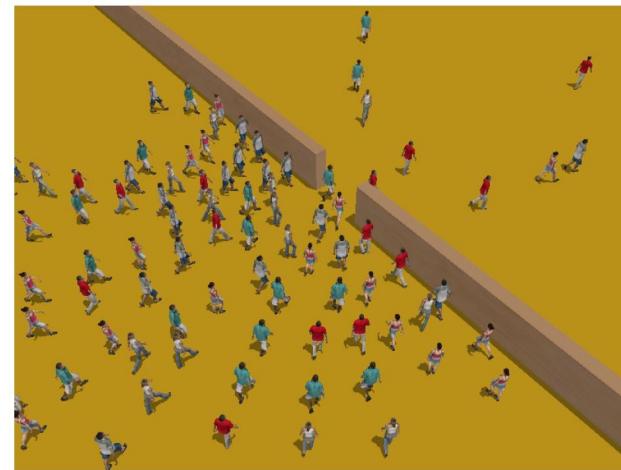

Single-agent vs. Multi-agent

- Is an agent operating by itself in the environment?

VS.

Known vs. Unknown

- Are the rules of the environment (transition model and rewards associated with states) known to the agent?
 - Strictly speaking, not a property of the environment, but of the agent's state of knowledge

vs.
